DESCRIPTION

The LM101A is a general-purpose operational amplifier which offers many features : supply voltages from ±5V to ±22V, low current drain, overload protection on the input and output, no latch-up when the common-mode range is exceeded, free from oscillations and compensation with a single 30pF capacitor. It has advantages over internally compensated amplifiers in that the compensation can be tailored to the particular application : slew rate of 10V/µs and bandwidth of 3.5MHz can be easily achieved.
