DESCRIPTION

The MC33079 is a monolithic quad operational amplifier particularly well suited for audio applications. It offers low voltage noise ($4.5\text{nV}/\sqrt{\text{Hz}}$) and high frequency performances (15MHz Gain Bandwidth product, 7V/ μs slew rate).

In addition the MC33079 has a very low distortion (0.002%) and excellent phase/gain margins.

The output stage allows a large output voltage swing and symmetrical source and sink currents.
