

FEATURES

Specified from -55°C to 125°C

0.9 $\mu\text{V}/^{\circ}\text{C}$ maximum input offset voltage drift

5 ppm/ $^{\circ}\text{C}$ maximum gain drift ($G = 1$)

Low power

2.3 mA maximum supply current

Low noise

3.2 nV/ $\sqrt{\text{Hz}}$ maximum input voltage noise at 1 kHz

200 fA/ $\sqrt{\text{Hz}}$ current noise at 1 kHz

Excellent ac specifications

2 MHz bandwidth ($G = 100$)

0.6 μs settling time to 0.001% ($G = 10$)

80 dB minimum CMRR at 20 kHz ($G = 1$)

High precision dc performance

84 dB CMRR minimum ($G = 1$)

2 nA maximum input bias current

Inputs protected to 40 V from opposite supply

Gain set with a single resistor ($G = 1$ to 10,000)

ENHANCED PRODUCT FEATURES

Supports defense and aerospace applications (AQEC standard)

Military temperature range (-55°C to $+125^{\circ}\text{C}$)

Controlled manufacturing baseline

One assembly/test site

One fabrication site

Enhanced product change notification

Qualification data available on request

GENERAL DESCRIPTION

The **AD8421-EP** is a low cost, low power, extremely low noise, ultralow bias current, high speed instrumentation amplifier that is ideally suited for a broad spectrum of signal conditioning and data acquisition applications. This product features extremely high CMRR, allowing it to extract low level signals in the presence of high frequency common-mode noise over a wide temperature range.

The 10 MHz bandwidth, 35 V/ μs slew rate, and 0.6 μs settling time to 0.001% ($G = 10$) allow the **AD8421-EP** to amplify high speed signals and excel in applications that require high channel count, multiplexed systems. Even at higher gains, the current feedback architecture maintains high performance; for example, at $G = 100$, the bandwidth is 2 MHz and the settling time is 0.8 μs . The **AD8421-EP** has excellent distortion performance, making it suitable for use in demanding applications such as vibration analysis.

PIN CONNECTION DIAGRAM

Figure 1.

Figure 2. Noise Density vs. Source Resistance

The **AD8421-EP** delivers 3 nV/ $\sqrt{\text{Hz}}$ input voltage noise and 200 fA/ $\sqrt{\text{Hz}}$ current noise with only 2 mA quiescent current, making it an ideal choice for measuring low level signals. For applications with high source impedance, the **AD8421-EP** employs innovative process technology and design techniques to provide noise performance that is limited only by the sensor.

The **AD8421-EP** uses unique protection methods to ensure robust inputs while still maintaining very low noise. This protection allows input voltages up to 40 V from the opposite supply rail without damage to the part.

A single resistor sets the gain from 1 to 10,000. The reference pin can be used to apply a precise offset to the output voltage.

The **AD8421-EP** is specified over the military temperature range of -55°C to $+125^{\circ}\text{C}$. It is available in an 8-lead MSOP package.

Additional application and technical information can be found in the **AD8421** data sheet.

	Single supply	5		36	V
Quiescent Current Over Temperature	$T_A = -55^\circ\text{C}$ to $+125^\circ\text{C}$		2	2.3	mA
				2.8	mA
TEMPERATURE RANGE					
For Specified Performance		-55		+125	°C

¹ Total voltage noise = $\sqrt{(e_{n1})^2 + (e_{no}/G)^2 + e_{RG}^2}$. See the [AD8421](#) data sheet for more information.

² Total RTI $V_{OS} = (V_{OS1}) + (V_{OS0}/G)$.

³ These specifications do not include the tolerance of the external gain setting resistor, R_G . For $G > 1$, add R_G errors to the specifications given in this table.

⁴ Input voltage range of the [AD8421-EP](#) input stage only. The input range can depend on the common-mode voltage, differential voltage, gain, and reference voltage. See the Typical Performance Characteristics section for more information.

ABSOLUTE MAXIMUM RATINGS

Table 2.

Parameter	Rating
Supply Voltage	± 18 V
Output Short-Circuit Current Duration	Indefinite
Maximum Voltage at $-IN$ or $+IN$ ¹	$-V_S + 40$ V
Minimum Voltage at $-IN$ or $+IN$	$+V_S - 40$ V
Maximum Voltage at REF ²	$+V_S + 0.3$ V
Minimum Voltage at REF	$-V_S - 0.3$ V
Storage Temperature Range	-65°C to $+150^\circ\text{C}$
Operating Temperature Range	-55°C to $+125^\circ\text{C}$
Maximum Junction Temperature	150°C
ESD	
Human Body Model	2 kV
Charged Device Model	1.25 kV
Machine Model	0.2 kV

¹ For voltages beyond these limits, use input protection resistors. See the [AD8421](#) data sheet for more information.

² There are ESD protection diodes from the reference input to each supply, so REF cannot be driven beyond the supplies in the same way that $+IN$ and $-IN$ can. See the [AD8421](#) data sheet for more information.

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

THERMAL RESISTANCE

θ_{JA} is specified for a device in free air using a 4-layer JEDEC printed circuit board (PCB).

Table 3.

Package	θ_{JA}	Unit
8-Lead MSOP	138.6	$^\circ\text{C}/\text{W}$

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

Figure 3. Pin Configuration

Table 4. Pin Function Descriptions

Pin No.	Mnemonic	Description
1	-IN	Negative Input Terminal.
2, 3	R_G	Gain Setting Terminals. Place resistor across the R_G pins to set the gain. $G = 1 + (9.9 \text{ k}\Omega/R_G)$.
4	+IN	Positive Input Terminal.
5	$-V_S$	Negative Power Supply Terminal.
6	REF	Reference Voltage Terminal. Drive this terminal with a low impedance voltage source to level shift the output.
7	V_{OUT}	Output Terminal.
8	$+V_S$	Positive Power Supply Terminal.

TYPICAL PERFORMANCE CHARACTERISTICS

$T_A = 25^\circ\text{C}$, $V_S = \pm 15\text{ V}$, $V_{REF} = 0\text{ V}$, $R_L = 2\text{ k}\Omega$, unless otherwise noted.
