STK7563A**Chopper Type Parallel 2-Output
Voltage Regulator****Applications**

- Serial printers, line printers, office automation equipment
- Floppy disk units, portable VCRs

Features

- 2 outputs for microcomputer power supply (5V) and motor drive power supply (24V) and capable of delivering 2 regulated voltage outputs from 1 rectifier
- Chopper type permitting high efficiency, and separate excitation type oscillator common to 2 outputs causing no beat trouble
- Independent overcurrent protectors for 2 outputs (Foldback characteristics)
- External signal-used output cutoff function (Output 2)
- High-precision setting of output voltage eliminating the need to use a variable resistor for adjustment
- One input/output GND line making it possible for other negative voltage to be used jointly
- A negative voltage regulator (– 5V, – 12V, etc.) can be connected externally.
- Output voltage, output current constituting a series

Definition of Peak Current

Equivalent Circuit

- Since pin 12 is grounded to the substrate, noise may be affected when a heat sink is connected to the FG (Frame Ground), GND line, etc.
In this case, bring the heat sink to floating state or use an insulating sheet.

Test Circuit

ZD1 : $V_z \approx 6.8V/D.H.D.$ type (for overvoltage protection)

Unit (resistance: Ω , capacitance: F)

*The N.C. pin (pin 18) must not be used as a relay pin for other line, pin.

*Pins connected inside the IC (6-7, 8-9, 10-11, 14-15, 16-17) must be also connected on the printed circuit board.
