

Features

- Low On-Resistance (33Ω typ) Minimizes Distortion and Error Voltages
- Low Glitching Reduces Step Errors in Sample-and-Holds. Charge Injection, 2pC typ
- Single-Supply Operation (+2.5V to +16V)
- Improved Second Sources for MAX4501/MAX4502
- On-Resistance Matching Between Channels, $<2\Omega$
- On-Resistance Flatness, $<6\Omega$ max
- Low Off-Channel Leakage, $<5\text{nA}$ @ $+85^\circ\text{C}$
- TTL/CMOS Logic Compatible
- Fast Switching Speed, $t_{\text{ON}} < 150\text{ns}$
- Guaranteed Break-Before-Make action (PS303 only) eliminates momentary crosstalk
- Rail-to-Rail Analog Signal Dynamic Range
- Low Power Consumption, $<5\mu\text{W}$
- MSOP Package minimizes board area

Applications

- Audio, Video Switching and Routing
- Portable Instruments
- Data Acquisition Systems
- Sample-and-Holds
- Telecommunication Systems
- Battery-Powered Systems

Description

The PS301/PS302/PS303 are improved high precision, medium voltage analog switches designed to operate with single power supplies. The PS301 is a single-pole single-throw (SPST), normally open (NO) switch. The PS302 has the same pinout as the PS301 but is a normally closed (NC) switch. The PS303 has one normally open (NO) and one normally closed (NC) switch per package. Each switch conducts current equally well in either direction when on. In the off state each switch blocks voltages up to the power-supply rail.

With a +5V power supply, the PS301/PS302/PS303 guarantee $<60\Omega$ ON-resistance. ON-resistance matching between channels is within 2Ω . ON-resistance flatness is less than 6Ω over the specified range. All three devices guarantee low leakage currents ($<100\text{pA}$ @ 25°C , $<10\text{nA}$ @ $+85^\circ\text{C}$) and fast switching speeds ($t_{\text{ON}} < 150\text{ns}$). Break-before-make switching action protects against momentary crosstalk (PS303).

For single-supply operation below 5V, the PI5A317/318/319 are also recommended.

Thermal Information

Continuous Power Dissipation

Plastic DIP (derate 6mW/ °C above +70°C) 500mW

Narrow SO (derate 6mW/ °C above +70°C) 450mW

MSOP (derate 4mW/ °C above +70°C) 330mW

Storage Temperature -65°C to +150°C

Lead Temperature (soldering, 10s) +300°C

Note 1: Signals on NC, NO, COM, or IN exceeding V+ or GND are clamped by internal diodes. Limit forward diode current to 30mA maximum.

Caution: Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied.

Electrical Specifications - Single +5V Supply (V+ = 5V +10%, GND = 0V, V_{INH} = 2.4V, V_{INL} = 0.8V)

Notes:

- The algebraic convention, where the most negative value is a minimum and the most positive is a maximum, is used in this data sheet.
- Typical values are for DESIGN AID ONLY, not guaranteed or subject to production testing.
- Guaranteed by design
- ΔR_{ON} = R_{ON} max. - R_{ON} min.
- Flatness is defined as the difference between the maximum and minimum value of on-resistance measured.
- Leakage parameters are 100% tested at maximum rated hot temperature and guaranteed by correlation at +25°C.
- Off Isolation = 20log₁₀ [V_{COM} / (V_{NC} or V_{NO})]. See Figure 5.

Applications Information

Overvoltage Protection

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings, because stresses beyond the listed ratings may cause permanent damage to the devices. Always sequence V+ on first, and then logic inputs. If power-supply sequencing is not possible, add two small signal diodes or two current limiting resistors in series with the supply pins for overvoltage protection (Figure 1). Adding diodes reduces the analog signal range, but low switch resistance and low leakage characteristics are unaffected.

Logic Levels

When powered from +5V the PS301/PS302/PS303 can be operated with either TTL- or CMOS-Logic levels. If V+ is different than +5V, the logic threshold level will vary.

Power consumption is minimal when the logic control voltages reach V+ or GND.

Figure 1. Overvoltage protection is accomplished by using two external blocking diodes or two current limiting resistors.
