RF (Radio Frequency) Type [2-Channel (Form A) Type] —Low On resistance—

PhotoMOS RELAYS

FEATURES

1. PhotoMOS relay 2-channels (Form A) type with high response speed, low leakage current and low On resistance.

2. Applicable for 2 Form A use as well as two independent 1 Form A use

3. Compact 8-pin DIP size
The device comes in a compact (W) 6.4x(L) 9.78x(H) 3.9 mm (W) .252x(L) .385x(H) .154 inch, 8-pin DIP size (through hole terminal type).

4. Low capacitance between output terminals ensures high response speed:

The capacitance between output terminals is small, typically 10 pF. This enables for a fast operation speed of 200 μ s.

5. High sensitivity and low On resistance:

Maximum 0.16 A of load current can be controlled with input current of 5 mA (AQW225N). The 10 Ω On resistance is less than our conventional models. With no metallic contacts, the PhotoMOS relay has stable switching characteristics.

6. Low-level off state leakage current:
The SSR has an off state leakage current of several milliamperes, whereas the PhotoMOS relay has only 30 pA even with the rated load voltage of 80 V (AQW225N).

7. Controls low-level analog signals:
PhotoMOS relay features extremely low closed-circuit offset voltages to enable control of small analog signals without distortion.

8. Low terminals electromotive force:
(approx. 1 μ V)

TYPICAL APPLICATIONS

- Measuring equipment
- Scanner, IC checker, Board tester
