

**FULLY PROTECTED POWER MOSFET SWITCH**

**Features**

- Over temperature shutdown
- Over current shutdown
- Active clamp
- Low current & logic level input
- E.S.D protection

**Description**

The IPS0151/IPS0151S are fully protected three terminal SMART POWER MOSFETs that feature over-current, over-temperature, ESD protection and drain to source active clamp. These devices combine a HEXFET® POWER MOSFET and a gate driver. They offer full protection and high reliability required in harsh environments. The driver allows short switching times and provides efficient protection by turning OFF the power MOSFET when the temperature exceeds 165°C or when the drain current reaches 35A. The device restarts once the input is cycled. The avalanche capability is significantly enhanced by the active clamp and covers most inductive load demagnetizations.

**Product Summary**

$R_{ds(on)}$	25mΩ (max)
$V_{clamp}$	50V
$I_{shutdown}$	35A
$T_{on}/T_{off}$	1.5μs

## Absolute Maximum Ratings

Absolute maximum ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are referenced to SOURCE lead. (T<sub>Ambient</sub> = 25°C unless otherwise specified). PCB mounting uses the standard footprint with 70 µm copper thickness.

Symbol	Parameter	Min.	Max.	Units	Test Conditions
V <sub>ds</sub>	Maximum drain to source voltage	—	47	V	
V <sub>in</sub>	Maximum Input voltage	-0.3	7		
I <sub>in, max</sub>	Maximum IN current	-10	+10		mA
