

256K X 36, 512K X 18
3.3V Synchronous SRAMs
2.5V I/O, Burst Counter

IDT71V67702
IDT71V67902

Flow-Through Outputs, Single Cycle Deselect

Features

- ♦ 256K x 36, 512K x 18 memory configurations
- ♦ Supports fast access times:
 - 7.5ns up to 117MHz clock frequency
 - 8.0ns up to 100MHz clock frequency
 - 8.5ns up to 87MHz clock frequency
- ♦ **LBO** input selects interleaved or linear burst mode
- ♦ Self-timed write cycle with global write control (**GW**), byte write enable (**BWE**), and byte writes (**BW_x**)
- ♦ 3.3V core power supply
- ♦ Power down controlled by **ZZ** input
- ♦ 2.5V I/O supply (**VDDQ**)
- ♦ Packaged in a JEDEC Standard 100-pin thin plastic quad flatpack (TQFP), 119 ball grid array (BGA) and 165 fine pitch ball grid array (fBGA).

Description

The IDT71V67702/7902 are high-speed SRAMs organized as 256K x 36/512K x 18. The IDT71V67702/7902 SRAMs contain write,

data, address and control registers. There are no registers in the data output path (flow-through architecture). Internal logic allows the SRAM to generate a self-timed write based upon a decision which can be left until the end of the write cycle.

The burst mode feature offers the highest level of performance to the system designer, as the IDT71V67702/7902 can provide four cycles of data for a single address presented to the SRAM. An internal burst address counter accepts the first cycle address from the processor, initiating the access sequence. The first cycle of output data will flow-through from the array after a clock-to-data access time delay from the rising clock edge of the same cycle. If burst mode operation is selected (**ADV**=LOW), the subsequent three cycles of output data will be available to the user on the next three rising clock edges. The order of these three addresses are defined by the internal burst counter and the **LBO** input pin.

The IDT71V67702/7902 SRAMs utilize IDT's latest high-performance CMOS process and are packaged in a JEDEC standard 14mm x 20mm 100-pin thin plastic quad flatpack (TQFP) as well as a 119 ball grid array (BGA) and a 165 fine pitch ball grid array (fBGA).

Pin Description Summary

A0-A18	Address Inputs	Input	Synchronous
$\overline{CE}$	Chip Enable	Input	Synchronous
CS0, $\overline{CS_1}$	Chip Selects	Input	Synchronous
$\overline{OE}$	Output Enable	Input	Asynchronous
$\overline{GW}$	Global Write Enable	Input	Synchronous
$\overline{BWE}$	Byte Write Enable	Input	Synchronous
$\overline{BW_1}$, $\overline{BW_2}$, $\overline{BW_3}$, $\overline{BW_4}^{(1)}$	Individual Byte Write Selects	Input	Synchronous
CLK	Clock	Input	N/A
$\overline{ADV}$	Burst Address Advance	Input	Synchronous
$\overline{ADSC}$	Address Status (Cache Controller)	Input	Synchronous
$\overline{ADSP}$	Address Status (Processor)	Input	Synchronous
$\overline{LBO}$	Linear / Interleaved Burst Order	Input	DC
ZZ	Sleep Mode	Input	Asynchronous
I/O0-I/O31, I/OP1-I/OP4	Data Input / Output	I/O	Synchronous
VDD, VDDQ	Core Power, I/O Power	Supply	N/A
VSS	Ground	Supply	N/A

NOTE:

1. $\overline{BW_3}$ and $\overline{BW_4}$ are not applicable for the IDT71V67902.

5317 tbl 01

DECEMBER 2003

Pin Definitions⁽¹⁾

Symbol	Pin Function	I/O	Active	Description
A ₀ -A ₁₈	Address Inputs	I	N/A	Synchronous Address inputs. The address register is triggered by a combination of the rising edge of CLK and $\overline{\text{ADSC}}$ Low or $\overline{\text{ADSP}}$ Low and $\overline{\text{CE}}$ Low.
$\overline{\text{ADSC}}$	Address Status (Cache Controller)	I	LOW	Synchronous Address Status from Cache Controller. $\overline{\text{ADSC}}$ is an active LOW input that is used to load the address registers with new addresses.
$\overline{\text{ADSP}}$	Address Status (Processor)	I	LOW	Synchronous Address Status from Processor. $\overline{\text{ADSP}}$ is an active LOW input that is used to load the address registers with new addresses. $\overline{\text{ADSP}}$ is gated by $\overline{\text{CE}}$.
$\overline{\text{ADV}}$	Burst Address Advance	I	LOW	Synchronous Address Advance. $\overline{\text{ADV}}$ is an active LOW input that is used to advance the internal burst counter, controlling burst access after the initial address is loaded. When the input is HIGH the burst counter is not incremented; that is, there is no address advance.
$\overline{\text{BWE}}$	Byte Write Enable	I	LOW	Synchronous byte write enable gates the byte write inputs $\overline{\text{BW}}_1$ - $\overline{\text{BW}}_4$. If $\overline{\text{BWE}}$ is LOW at the rising edge of CLK then $\overline{\text{BW}}_x$ inputs are passed to the next stage in the circuit. If $\overline{\text{BWE}}$ is HIGH then the byte write inputs are blocked and only $\overline{\text{GW}}$ can initiate a write cycle.
$\overline{\text{BW}}_1$ - $\overline{\text{BW}}_4$	Individual Byte Write Enables	I	LOW	Synchronous byte write enables. $\overline{\text{BW}}_1$ controls I/O ₀₋₇ , I/OP ₁ , $\overline{\text{BW}}_2$ controls I/O ₈₋₁₅ , I/OP ₂ , etc. Any active byte write causes all outputs to be disabled.
$\overline{\text{CE}}$	Chip Enable	I	LOW	Synchronous chip enable. $\overline{\text{CE}}$ is used with CS_0 and $\overline{\text{CS}}_1$ to enable the IDT71V67702/7902. $\overline{\text{CE}}$ also gates $\overline{\text{ADSP}}$.
CLK	Clock	I	N/A	This is the clock input. All timing references for the device are made with respect to this input.
CS_0	Chip Select 0	I	HIGH	Synchronous active HIGH chip select. CS_0 is used with $\overline{\text{CE}}$ and $\overline{\text{CS}}_1$ to enable the chip.
$\overline{\text{CS}}_1$	Chip Select 1	I	LOW	Synchronous active LOW chip select. $\overline{\text{CS}}_1$ is used with $\overline{\text{CE}}$ and CS_0 to enable the chip.
$\overline{\text{GW}}$	Global Write Enable	I	LOW	Synchronous global write enable. This input will write all four 9-bit data bytes when LOW on the rising edge of CLK. $\overline{\text{GW}}$ supersedes individual byte write enables.
I/O ₀ -I/O ₃₁ I/OP ₁ -I/OP ₄	Data Input/Output	I/O	N/A	Synchronous data input/output (I/O) pins. The data input path is registered, triggered by the rising edge of CLK. The data output path is flow-through (no output register).
$\overline{\text{LBO}}$	Linear Burst Order	I	LOW	Asynchronous burst order selection input. When $\overline{\text{LBO}}$ is HIGH, the inter-leaved burst sequence is selected. When $\overline{\text{LBO}}$ is LOW the Linear burst sequence is selected. $\overline{\text{LBO}}$ is a static input and must not change state while the device is operating.
$\overline{\text{OE}}$	Output Enable	I	LOW	Asynchronous output enable. When $\overline{\text{OE}}$ is LOW the data output drivers are enabled on the I/O pins if the chip is also selected. When $\overline{\text{OE}}$ is HIGH the I/O pins are in a high-impedance state.
V _{DD}	Power Supply	N/A	N/A	3.3V core power supply.
V _{DDQ}	Power Supply	N/A	N/A	2.5V I/O Supply.
V _{SS}	Ground	N/A	N/A	Ground.
NC	No Connect	N/A	N/A	NC pins are not electrically connected to the device.
ZZ	Sleep Mode	1	HIGH	Asynchronous sleep mode input. ZZ HIGH will gate the CLK internally and power down the IDT71V67702/7902 to its lowest power consumption level. Data retention is guaranteed in Sleep Mode.

NOTE:

1. All synchronous inputs must meet specified setup and hold times with respect to CLK.

	Industrial	-40 to +85	°C
T _{BIAS}	Temperature Under Bias	-55 to +125	°C
T _{STG}	Storage Temperature	-55 to +125	°C
P _T	Power Dissipation	2.0	W
I _{OUT}	DC Output Current	50	mA

NOTES:

5317 tbl 03

- Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
- V_{DD} terminals only.
- V_{DDQ} terminals only.
- Input terminals only.
- I/O terminals only.
- This is a steady-state DC parameter that applies after the power supplies have ramped up. Power supply sequencing is not necessary; however, the voltage on any input or I/O pin cannot exceed V_{DDQ} during power supply ramp up.
- T_A is the "instant on" case temperature.

Recommended Operating Temperature Supply Voltage

Grade	Temperature ⁽¹⁾	V _{SS}	V _{DD}	V _{DDQ}
Commercial	0°C to +70°C	0V	3.3V±5%	2.5V±5%
Industrial	-40°C to +85°C	0V	3.3V±5%	2.5V±5%

5317 tbl 04

NOTE:

- T_A is the "instant on" case temperature.

Recommended DC Operating Conditions

Symbol	Parameter	Min.	Typ.	Max.	Unit
V _{DD}	Core Supply Voltage	3.135	3.3	3.465	V
V _{DDQ}	I/O Supply Voltage	2.375	2.5	2.625	V
V _{SS}	Ground	0	0	0	V
V _{IH}	Input High Voltage - Inputs	1.7	—	V _{DD} +0.3	V
V _{IH}	Input High Voltage - I/O	1.7	—	V _{DDQ} +0.3	V
V _{IL}	Input Low Voltage	-0.3 ⁽¹⁾	—	0.7	V

5317 tbl 05

NOTE:

- V_{IL} (min) = -1.0V for pulse width less than t_{CVZ}/2, once per cycle.

5317 tbl 09

NOTES:

- All values are maximum guaranteed values.
- At $f = f_{MAX}$, inputs are cycling at the maximum frequency of read cycles of $1/t_{CYC}$ while $\overline{ADSC} = \text{LOW}$; $f=0$ means no input lines are changing.
- For I/Os $V_{HD} = V_{DDQ} - 0.2V, V_{LD} = 0.2V$. For other inputs $V_{HD} = V_{DD} - 0.2V, V_{LD} = 0.2V$.

5317 tbl 11

NOTES:

1. L = V_{IL} , H = V_{IH} , X = Don't Care.
2. $\overline{OE}$ is an asynchronous input.
3. ZZ - low for the table.

Synchronous Write Function Truth Table ^(1, 2)

Operation	$\overline{GW}$	$\overline{BWE}$	$\overline{BW}_1$	$\overline{BW}_2$	$\overline{BW}_3$	$\overline{BW}_4$
Read	H	H	X	X	X	X
Read	H	L	H	H	H	H
Write all Bytes	L	X	X	X	X	X
Write all Bytes	H	L	L	L	L	L
Write Byte 1 ⁽³⁾	H	L	L	H	H	H
Write Byte 2 ⁽³⁾	H	L	H	L	H	H
Write Byte 3 ⁽³⁾	H	L	H	H	L	H
Write Byte 4 ⁽³⁾	H	L	H	H	H	L

5317 tbl 12

NOTES:

1. L = V_{IL} , H = V_{IH} , X = Don't Care.
2. $\overline{BW}_3$ and $\overline{BW}_4$ are not applicable for the IDT71V67902.
3. Multiple bytes may be selected during the same cycle.

Asynchronous Truth Table ⁽¹⁾

Operation ⁽²⁾	$\overline{OE}$	ZZ	I/O Status	Power
Read	L	L	Data Out	Active
Read	H	L	High-Z	Active
Write	X	L	High-Z – Data In	Active
Deselected	X	L	High-Z	Standby
Sleep Mode	X	H	High-Z	Sleep

5317 tbl 13

NOTES:

1. L = V_{IL} , H = V_{IH} , X = Don't Care.
2. Synchronous function pins must be biased appropriately to satisfy operation requirements.

Interleaved Burst Sequence Table ($\overline{LBO}=V_{DD}$)

	Sequence 1		Sequence 2		Sequence 3		Sequence 4	
	A1	A0	A1	A0	A1	A0	A1	A0
First Address	0	0	0	1	1	0	1	1
Second Address	0	1	0	0	1	1	1	0
Third Address	1	0	1	1	0	0	0	1
Fourth Address ⁽¹⁾	1	1	1	0	0	1	0	0

5317 tbl 14

NOTE:

1. Upon completion of the Burst sequence the counter wraps around to its initial state.

Linear Burst Sequence Table ($\overline{LBO}=V_{SS}$)

	Sequence 1		Sequence 2		Sequence 3		Sequence 4	
	A1	A0	A1	A0	A1	A0	A1	A0
First Address	0	0	0	1	1	0	1	1
Second Address	0	1	1	0	1	1	0	0
Third Address	1	0	1	1	0	0	0	1
Fourth Address ⁽¹⁾	1	1	0	0	0	1	1	0

5317 tbl 15

NOTE:

1. Upon completion of the Burst sequence the counter wraps around to its initial state.

t _{CFG} ⁽⁴⁾	Configuration Set-up Time	34	—	40	—	50	—	ns

5317 tbl 16

NOTES:

1. Measured as HIGH above V_{IH} and LOW below V_{IL}.
2. Transition is measured ±200mV from steady-state.
3. Device must be deselected when powered-up from sleep mode.
4. t_{CFG} is the minimum time required to configure the device based on the $\overline{\text{LBO}}$ input. $\overline{\text{LBO}}$ is a static input and must not change during normal operation.

[illegible]

NOTES:

1. O1 (Ax) represents the first output from the external address Ax. O1 (Ay) represents the first output from the external address Ay. O2 (Ay) represents the next output data in the burst sequence of the base address Ay, etc. where A0 and A1 are advancing for the four word burst in the sequence defined by the state of the LBO input.
2. ZZ input is LOW and LBO is Don't Care for this cycle.

2. ZZ input is LOW and LB0 is Don't Care for this cycle.
3. CS0 timing transitions are identical but inverted to the OE and CS1 signals. For example, when OE and CS1 are LOW on this waveform, CS0 is HIGH.

Timing Waveform of Combined Flow-Through Read and Write Cycles (1,2,3)

5317 drw 07

NOTES:

1. Device is selected through entire cycle; $\overline{OE}$ and $\overline{CS1}$ are LOW, $\overline{CS0}$ is HIGH.
2. ZZ input is LOW and $\overline{LBO}$ is Don't Care for this cycle.
3. O1 (Ax) represents the first output from the external address Ax. I1 (Ay) represents the first input from the external address Ay; O1 (Az) represents the first output from the external address Az; O2 (Az) represents the next output data in the burst sequence of the base address Az, etc. where A0 and A1 are advancing for the four word burst in the sequence defined by the state of the $\overline{LBO}$ input.

Timing Waveform of Write Cycle No. 2 - Byte Controlled (1,2,3)

5317 drw 09

NOTES:

1. Z $\bar{Z}$ input is LOW, $\overline{G\bar{W}}$ is HIGH and $\overline{L\bar{B}\bar{O}}$ is Don't Care for this cycle.
2. O4 (Aw) represents the final output data in the burst sequence of the base address Aw. I1 (Ax) represents the first input from the external address Ax. I1 (Ay) represents the first input from the external address Ay. I2 (Ay) represents the next input data in the burst sequence of the base address Ay, etc. where A0 and A1 are advancing for the four word burst in the sequence defined by the state of the $\overline{L\bar{B}\bar{O}}$ input. In the case of input I2 (Ay) this data is valid for two cycles because ADV is high and has suspended the burst.
3. CS0 timing transitions are identical but inverted to the $\overline{C\bar{E}}$ and $\overline{C\bar{S}1}$ signals. For example, when $\overline{C\bar{E}}$ and $\overline{C\bar{S}1}$ are LOW on this waveform, CS0 is HIGH.

Timing Waveform of Sleep (ZZ) and Power-Down Modes (1,2,3)

5317 dhw 13

NOTES:

1. Device must power up in deselected Mode.
2. $\overline{LB0}$ is Don't Care for this cycle.
3. It is not necessary to retain the state of the input registers throughout the Power-down cycle.
4. CS0 timing transitions are identical but inverted to the CE and CS1 signals. For example, when CE and CS1 are LOW on this waveform, CS0 is HIGH.

Non-Burst Read Cycle Timing Waveform

NOTES:

1. $\overline{ZZ}$ input is LOW, $\overline{ADV}$ is HIGH and $\overline{LBO}$ is Don't Care for this cycle.
2. (A_x) represents the data for address A_x , etc.
3. For read cycles, $\overline{ADSP}$ and $\overline{ADSC}$ function identically and are therefore interchangeable.

5317 drw 10

Non-Burst Write Cycle Timing Waveform

NOTES:

1. $\overline{ZZ}$ input is LOW, $\overline{ADV}$ and $\overline{OE}$ are HIGH, and $\overline{LBO}$ is Don't Care for this cycle.
2. (A_x) represents the data for address A_x , etc.
3. Although only $\overline{GW}$ writes are shown, the functionality of $\overline{BWE}$ and $\overline{BWX}$ together is the same as $\overline{GW}$.
4. For write cycles, $\overline{ADSP}$ and $\overline{ADSC}$ have different limitations.

Ordering Information

Datasheet Document History

12/31/99	Created Datasheet from 71V677 and 71V679 Datasheets For 3.3V I/O offering, see 71V67703 and 71V67903 Datasheets
04/26/00	Pg. 4 Add capacitance for BGA package; Insert clarification note to Absolute Max Ratings and Recommended Operating Temperature tables. Pg. 7 Replace Pin U6 with $\overline{\text{TRST}}$ pin in BGA pin configuration; Add pin description note in pinout Pg. 18 Inserted 100 pin TQFP Package Diagram Outline
05/24/00	Pg. 1,4,8,21 Add new package offering, 13 x 15 fBGA 22 Pg. 5,6,7,8 Correct note 2 on BGA and TQFP pin configuration Pg. 20 Correction in the 119 BGA Package Diagram Outline
07/12/00	Pg. 5,6,8 Remove note from TQFP and BQ165 pinout Pg. 7 Add/Remove reference note from BG119 pinout Pg. 20 Update BG119 package diagram outline dimensions
07/16/01	Pg. 9 Updated ISB2 levels for tcd = 7.5ns - 8.5ns
10/29/01	Pg. 1,2 Remove JTAG pins Pg. 7 Changed U2-U6 pins to DNU Pg. 8 Changed P5, P7, R5 & R7 pins to DNU Pg. 9 Raise specs on 7.5ns, 8ns & 8.5ns by 10mA
08/27/02	Pg. 4,9,12, Added Industrial information to the datasheet. 22
10/22/02	Pg. 1-23 Changed datasheet from Advanced Information to Final Release.
04/15/03	Pg. 4 Updated 165 fBGA table from TBD to 7.
12/20/03	Pg. 7 Updated 119BGA pin configurations- I/O signals on P6, P7 (128K x36) and P7, N6, L6, K7, H6, G7, F6, E7, D6 (256K x 18).
