

Single/Dual/Quad, Low-Cost, Single-Supply, Rail-to-Rail Op Amps with Shutdown

MAX4400-MAX4403

General Description

The MAX4400–MAX4403 low-cost, general-purpose op amps offer Rail-to-Rail® outputs, draw only 320 μ A of quiescent current, and operate from a single +2.5V to +5.5V supply. For additional power conservation, the MAX4401 offers a low-power shutdown mode that reduces supply current to 1 μ A max and puts the amplifier's outputs in a high-impedance state. These devices deliver ± 1.4 mA of output current and are unity-gain stable with a 1MHz gain-bandwidth product driving capacitive loads up to 400pF. The MAX4400–MAX4403 are specified to +125°C, making them suitable for use in a variety of harsh environments, such as automotive applications.

The MAX4400 single amplifier is available in ultra-small 5-pin SC70 and space-saving 5-pin SOT23 packages. The single MAX4401 includes the shutdown feature and is available in a 6-pin SC70. The MAX4402 is a dual amplifier available in 8-pin SOT23 and SO packages. The MAX4403 quad amplifier comes packaged in a 14-pin TSSOP or SO.

Selector Guide

PART	NO. OF AMPLIFIERS PER PACKAGE	SHUTDOWN MODE
MAX4400	1	No
MAX4401	1	Yes
MAX4402	2	No
MAX4403	4	No

Applications

Single-Supply Zero-Crossing Detectors
Instruments and Terminals
Portable Communications
Electronic Ignition Modules
Infrared Receivers
Sensor Signal Detection

Features

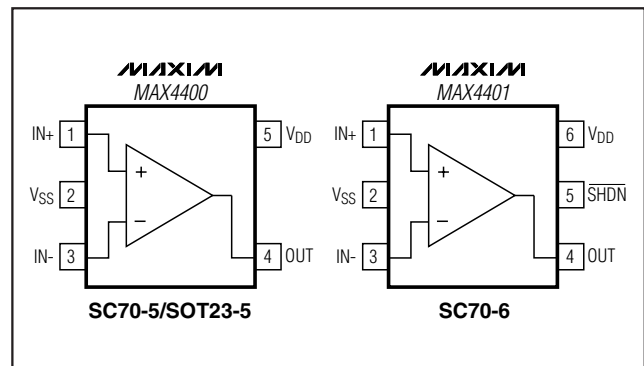

- ◆ Single +2.5V to +5.5V Supply Voltage Range
- ◆ 320 μ A Quiescent Current per Amplifier
- ◆ 1 μ A max Shutdown Mode (MAX4401)
- ◆ Available in Space-Saving Packages
 - 5-Pin SC70 (MAX4400)
 - 6-Pin SC70 (MAX4401)
 - 8-Pin SOT23 (MAX4402)
- ◆ 110dB A_{VOL} with 2k Ω Load
- ◆ 0.015% THD with 2k Ω Load
- ◆ Rail-to-Rail Output Voltage Swing
- ◆ 1.4mA of Sink and Source Load Current
- ◆ Unity-Gain Stable up to $C_{LOAD} = 400$ pF
- ◆ Ground-Sensing Inputs

Single/Dual/Quad, Low-Cost, Single-Supply, Rail-to-Rail Op Amps with Shutdown

ABSOLUTE MAXIMUM RATINGS

Power-Supply Voltage (V_{DD} to V_{SS})	-0.3V to +6V	8-Pin SOT23 (derate 7.52mW/°C above +70°C)	602mW
All Other Pins	($V_{SS} - 0.3V$) to ($V_{DD} + 0.3V$)	8-Pin SO (derate 5.88mW/°C above +70°C)	471mW
Output Short-Circuit Duration (OUT shorted to V_{SS} or V_{DD})	Continuous	14-Pin TSSOP (derate 8.33mW/°C above +70°C)	667mW
Continuous Power Dissipation ($T_A = +70^\circ\text{C}$)		14-Pin SO (derate 8.33mW/°C above +70°C)	667mW
5-Pin SC70 (derate 2.5mW/°C above +70°C)	200mW	Operating Temperature Range	-40°C to +125°C
6-Pin SC70 (derate 2.27mW/°C above +70°C)	181mW	Storage Temperature Range	-65°C to +150°C
5-Pin SOT23 (derate 7.1mW/°C above +70°C)	571mW	Lead Temperature (soldering, 10s)	+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

Detailed Description

Rail-to-Rail Output Stage

The MAX4400–MAX4403 can drive a 2k Ω load and still typically swing within 55mV of the supply rails. Figure 1 shows the output voltage swing of the MAX4400 configured with $A_v = +10V/V$.

Driving Capacitive Loads

Driving a capacitive load can cause instability in many op amps, especially those with low quiescent current. The MAX4400–MAX4403 are unity-gain stable for a range of capacitive loads to above 400pF. Figure 2 shows the response of the MAX4400 with an excessive capacitive load. Adding a series resistor between the output and the load capacitor (Figure 3) improves the

Figure 5. Power-Up/Power-Down Waveform

circuit's response by isolating the load capacitance from the op amp's output.

Applications Information

Shutdown Mode

The MAX4401 features a low-power shutdown mode. When $\overline{\text{SHDN}}$ goes low, the supply current drops to 0.1µA (typical). The output enters a high-impedance state. Pull $\overline{\text{SHDN}}$ high to enable the amplifier. Do not leave $\overline{\text{SHDN}}$ floating. Figure 4 shows the shutdown waveform.

Power-Up

The MAX4400-MAX4403 outputs typically settle within 5µs after power-up. Figure 5 shows the output voltage on power-up and power-down.

Power Supplies and Layout

The MAX4400-MAX4403 operate from a single +2.5V to +5.5V power supply. Bypass the power supply with a 0.1µF capacitor to ground.

Good layout techniques optimize performance by decreasing the amount of stray capacitance at the op amp's inputs and outputs. To decrease stray capacitance, minimize trace lengths by placing external components close to the op amp's pins.
