

GD65232, GD75232 MULTIPLE RS-232 DRIVERS AND RECEIVERS

SLLS206H – MAY 1995 – REVISED JUNE 2002

- Single Chip With Easy Interface Between UART and Serial-Port Connector of IBM™ PC/AT and Compatibles
- Meet or Exceed the Requirements of ANSI Standard TIA/EIA-232-F and ITU Recommendation V.28
- Designed to Support Data Rates up to 120 kbit/s
- Pinout Compatible With SN75C185 and SN75185

description

The GD65232 and GD75232 combine three drivers and five receivers from the Texas Instruments trade-standard SN75188 and SN75189 bipolar quadruple drivers and receivers, respectively. The pinout matches the flow-through design of the SN75C185 to decrease the part count, reduce the board space required, and allow easy interconnection of the UART and serial-port connector of an IBM™ PC/AT and compatibles. The bipolar circuits and processing of the GD65232 and GD75232 provide a rugged, low-cost solution for this function at the expense of quiescent power and external passive components relative to the SN75C185.

The GD65232 and GD75232 comply with the requirements of the TIA/EIA-232-F and ITU (formerly CCITT) V.28 standards. These standards are for data interchange between a host computer and a peripheral at signaling rates up to 20 kbit/s. The switching speeds of these devices are fast enough to support rates up to 120 kbit/s with lower capacitive loads (shorter cables). Interoperability at the higher signaling rates cannot be expected unless the designer has design control of the cable and the interface circuits at both ends. For interoperability at signaling rates up to 120 kbit/s, use of ANSI TIA/EIA-423-B (ITU V.10) and TIA/EIA-422-B (ITU V.11) standards is recommended.

logic diagram (positive logic)

schematic (each driver)

schematic (each receiver)

Resistor values shown are nominal.

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)[†]

Supply voltage (see Note 1): V_{CC}	10 V
V_{DD}	15 V
V_{SS}	-15 V
Input voltage range, V_I : Driver	-15 V to 7 V
Receiver	-30 V to 30 V
Driver output voltage range, V_O	-15 V to 15 V
Receiver low-level output current, I_{OL}	20 mA
Package thermal impedance, θ_{JA} (see Note 2): DB package	70°C/W
DW package	58°C/W
N package	69°C/W
PW package	83°C/W
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	260°C
Storage temperature range, T_{stg}	-65°C to 150°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. All voltages are with respect to the network ground terminal.

2. The package thermal impedance is calculated in accordance with JESD 51-7.

NOTE 3: When powering up the GD65232 and GD75232, the following sequence should be used:

1. V_{SS}
2. GND
3. V_{DD}
4. V_{CC}
5. I/Os

Applying V_{CC} to the device before V_{DD} may allow large currents to flow, causing damage to the device. When powering down the GD65232 and GD75232, the reverse sequence should be used.

APPLICATION INFORMATION

Diodes placed in series with the V_{DD} and V_{SS} leads protect the GD65232 and GD75232 in the fault condition in which the device outputs are shorted to ± 15 V and the power supplies are at low and provide low-impedance paths to ground (see Figure 15).
