OPA2107

SBOS161A – JANUARY 1989 – REVISED JULY 2003

Precision Dual *Difet* ® Operational Amplifier

FEATURES

- **Very Low Noise: 8nV/√Hz at 10kHz**
- **Low V_{OS}: 1mV max**
- **Low Drift: 10μV/°C max**
- **Low I_B: 10pA max**
- **Fast Settling Time: 2μs to 0.01%**
- **Unity-Gain Stable**

APPLICATIONS

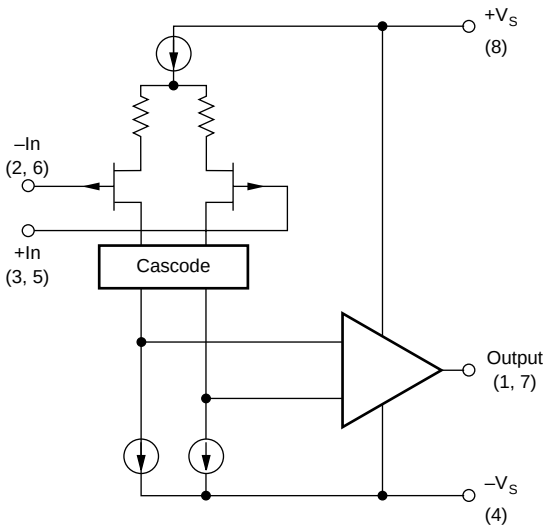
- **Data Acquisition**
- **DAC Output Amplifiers**
- **Optoelectronics**
- **High-Impedance Sensor Amps**
- **High-Performance Audio Circuitry**
- **Medical Equipment, CT Scanners**

DESCRIPTION

The OPA2107 dual operational amplifier provides precision ***Difet*** performance with the cost and space savings of a dual op amp. It is useful in a wide range of precision and low-noise analog circuitry and can be used to upgrade the performance of designs currently using BIFET® type amplifiers.

The OPA2107 is fabricated on a proprietary dielectrically isolated (***Difet***) process. This holds input bias currents to very low levels without sacrificing other important parameters, such as input offset voltage, drift and noise. Laser-trimmed input circuitry yields excellent dc performance. Superior dynamic performance is achieved, yet quiescent current is held to under 2.5mA per amplifier. The OPA2107 is unity-gain stable.

The OPA2107 is available in DIP-8 and SO-8 packages.



ABSOLUTE MAXIMUM RATINGS(1)

Supply Voltage	±18V
Input Voltage Range	$\pm V_S$ ±2V
Differential Input Voltage	Total V_S ±4V
Operating Temperature	
P and U Packages	–25°C to + 85°C
Storage Temperature	
P and U Packages	–40°C to +125°C
Output Short Circuit to Ground (T_A = +25°C)	Continuous
Junction Temperature	+175°C
Lead Temperature	
P Package (soldering, 10s)	+300°C
U Package, SOIC (3s)	+260°C

NOTE: Stresses above these ratings may cause permanent damage.

ELECTROSTATIC DISCHARGE SENSITIVITY

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

ELECTRICAL CHARACTERISTICS

At T_A = +25°C, V_S = ±15V, unless otherwise noted.

PARAMETER	CONDITION	OPA2107AP, AU			UNITS
		MIN	TYP	MAX	
OFFSET VOLTAGE(1)					
Input Offset Voltage	V_{CM} = 0V		0.1	1	mV
Over Specified Temperature			0.5	2	mV
Average Drift Over Specified Temperature			3	10	µV/°C
Power Supply Rejection	V_S = ±10 to ±18V	80	96		dB
INPUT BIAS CURRENT(1)					
Input Bias Current	V_{CM} = 0V		4	10	pA
Over Specified Temperature			0.25	1.5	nA
Input Offset Current	V_{CM} = 0V		1	8	pA
Over Specified Temperature				1	nA
INPUT NOISE					
Voltage: f = 10Hz	R_S = 0		30		nV/√Hz
f = 100Hz			12		nV/√Hz
f = 1kHz			9		nV/√Hz
f = 10kHz			8		nV/√Hz
BW = 0.1 to 10Hz			1.2		µVp-p
BW = 10 to 10kHz			0.85		µVrms
Current: f = 0.1Hz thru 20kHz			1.2		fA/√Hz
BW = 0.1Hz to 10Hz			23		fAp-p
INPUT IMPEDANCE					
Differential			10^{13} || 2		Ω || pF
Common-Mode			10^{14} || 4		Ω || pF
INPUT VOLTAGE RANGE					
Common-Mode Input Range		±10.5	±11		V
Over Specified Temperature		±10.2	±10.5		V
Common-Mode Rejection	V_{CM} = ±10V	80	94		dB
OPEN-LOOP GAIN					
Open-Loop Voltage Gain	V_O = ±10V, R_L = 2kΩ	82	96		dB
Over Specified Temperature		80	94		dB
DYNAMIC RESPONSE					
Slew Rate	G = +1	13	18		V/µs
Settling Time: 0.1%	G = –1, 10V Step		1.5		µs
0.01%			2		µs
Gain Bandwidth Product	G = 100		4.5		MHz
THD + Noise	G = +1, f = 1kHz		0.001		%
Channel Separation	f = 100Hz, R_L = 2kΩ		120		dB
POWER SUPPLY					
Specified Operating Voltage			±15		V
Operating Voltage Range		±4.5			V
Current			±4.5		mA
OUTPUT					
Voltage Output	R_L = 2kΩ	±11	±12		V
Over Specified Temperature		±10.5	±11.5		V
Short Circuit Current		±10	±40		mA
Output Resistance, Open-Loop	1MHz		70		Ω
Capacitive Load Stability	G = +1		1000		pF
TEMPERATURE RANGE					
Specification		–25		+85	°C
Operating		–25		+85	°C
Storage		–40		+125	°C
Thermal Resistance (θ_{J-A})					
DIP-8			90		°C/W
SO-8			175		°C/W

NOTE: (1) Specified with devices fully warmed up.

TYPICAL CHARACTERISTICS

T_A = +25°C, V_S = ±15V unless otherwise noted.

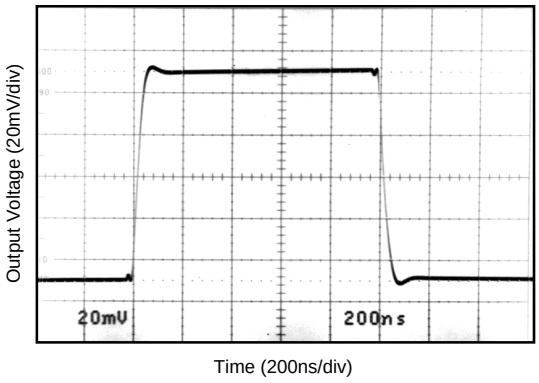
SMALL-SIGNAL RESPONSE



APPLICATIONS INFORMATION AND CIRCUITS

The OPA2107 is unity-gain stable and has an excellent phase margin. This makes it easy to use in a wide variety of applications.

Power-supply connections should be bypassed with capacitors positioned close to the amplifier pins. In most cases, 0.1µF ceramic capacitors are adequate. Applications with larger load currents and fast transient signals may need up to 1µF tantalum bypass capacitors.

INPUT BIAS CURRENT

The OPA2107 ***Difet*** input stages have very low input bias current—an order of magnitude lower than BIFET op amps. Circuit-board leakage paths can significantly degrade performance. This is especially evident with the SO-8 surface-mount package where pin-to-pin dimensions are particularly small. Residual soldering flux, dirt, and oils, which conduct leakage current, can be removed by proper cleaning. In most instances, a two-step cleaning process is adequate using a clean organic solvent rinse followed by deionized water. Each rinse should be followed by a 30-minute bake at 85°C.

A circuit-board guard pattern effectively reduces errors due to circuit-board leakage (Figure 1). By encircling critical high-impedance nodes with a low-impedance connection at the same circuit potential, any leakage currents will flow harmlessly to the low-impedance node. Guard traces should be placed on all levels of a multiple-layer circuit board.

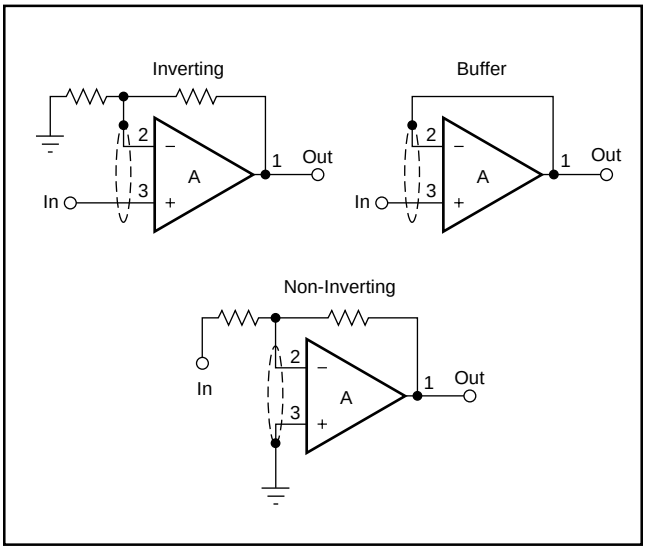


FIGURE 1. Connection of Input Guard.

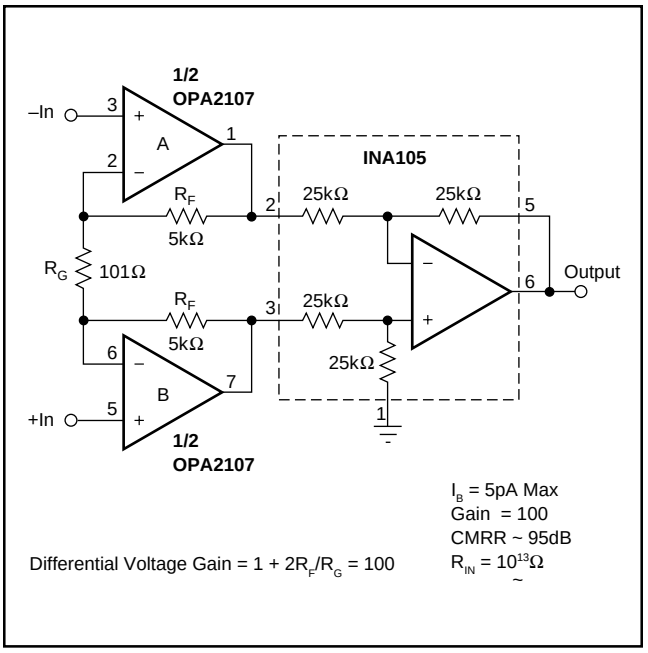

FIGURE 2. FET Input Instrumentation Amplifier.

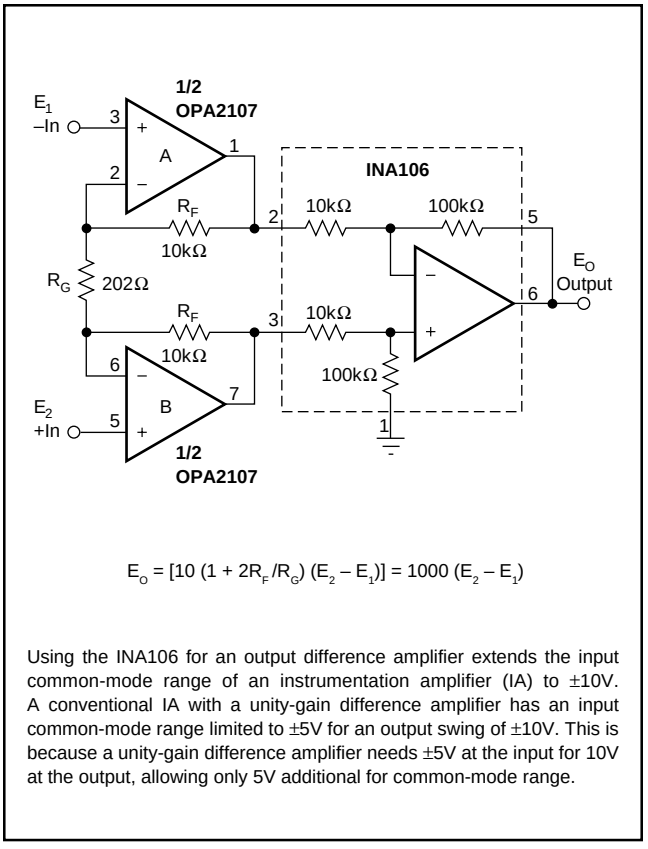

Using the INA106 for an output difference amplifier extends the input common-mode range of an instrumentation amplifier (IA) to ±10V. A conventional IA with a unity-gain difference amplifier has an input common-mode range limited to ±5V for an output swing of ±10V. This is because a unity-gain difference amplifier needs ±5V at the input for 10V at the output, allowing only 5V additional for common-mode range.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish	MSL Peak Temp (3)
OPA2107AP	ACTIVE	PDIP	P	8	50	Pb-Free (RoHS)	Call TI	Level-NC-NC-NC
OPA2107AU	ACTIVE	SOIC	D	8	100	None	CU SNPB	Level-3-220C-168 HR
OPA2107AU/2K5	ACTIVE	SOIC	D	8	2500	None	CU SNPB	Level-3-220C-168 HR

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - May not be currently available - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
None: Not yet available Lead (Pb-Free).
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Green (RoHS & no Sb/Br): TI defines "Green" to mean "Pb-Free" and in addition, uses package materials that do not contain halogens, including bromine (Br) or antimony (Sb) above 0.1% of total product weight.

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDECindustry standard classifications, and peak solder temperature.

NOTES:
A. All linear dimensions are in inches (millimeters).
B. This drawing is subject to change without notice.
C. Body dimensions do not include mold flash or protrusion not to exceed 0.006 (0,15).
D. Falls within JEDEC MS–012 variation AA.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.
