- A-Suffix Versions Offer 5-mV  $V_{IO}$
- B-Suffix Versions Offer 2-mV  $V_{IO}$
- Wide Range of Supply Voltages  
1.4 V to 16 V
- True Single-Supply Operation
- Common-Mode Input Voltage Includes the Negative Rail
- Low Noise . . . 30 nV/ $\sqrt{\text{Hz}}$  Typ at  $f = 1 \text{ kHz}$   
(High-Bias Versions)

symbol (each amplifier)

## description

The TLC252, TLC25L2, and TLC25M2 are low-cost, low-power dual operational amplifiers designed to operate with single or dual supplies. These devices utilize the Texas Instruments silicon gate LinCMOS™ process, giving them stable input offset voltages that are available in selected grades of 2, 5, or 10 mV maximum, very high input impedances, and extremely low input offset and bias currents. Because the input common-mode range extends to the negative rail and the power consumption is extremely low, this series is ideally suited for battery-powered or energy-conserving applications. The series offers operation down to a 1.4-V supply, is stable at unity gain, and has excellent noise characteristics.

These devices have internal electrostatic-discharge (ESD) protection circuits that prevent catastrophic failures at voltages up to 2000 V as tested under MIL-STD-883C, Method 3015.1. However, care should be exercised in handling these devices as exposure to ESD may result in a degradation of the device parametric performance.

## AVAILABLE OPTIONS

$T_A$	$V_{IOmax}$ AT 25°C	PACKAGED DEVICES			CHIP FORM (Y)
		SMALL OUTLINE (D)	PLASTIC DIP (P)	TSSOP (PW)	
0°C to 70°C	10 mV	TLC252CD	TLC252CP	TLC252CPW	TLC252Y
	5 mV	TLC252ACD	TLC252ACP	TLC252ACPW	—
	2 mV	TLC252BCD	TLC252BCP	TLC252BCPW	—
	10 mV	TLC25L2CD	TLC25L2CP	TLC25L2CPW	TLC25L2Y
	5 mV	TLC25L2ACD	TLC25L2ACP	TLC25L2ACPW	—
	2 mV	TLC25L2BCD	TLC25L2BCP	TLC25L2BCPW	—
	10 mV	TLC25M2CD	TLC25M2CP	—	TLC25M2Y
	5 mV	TLC25M2ACD	TLC25M2ACP	—	—
	2 mV	TLC25M2BCD	TLC25M2BCP	—	—

The D package is available taped and reeled. Add the suffix R to the device type (e.g., TLC252CDR). Chips are tested at 25°C.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

LinCMOS is a trademark of Texas Instruments.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

SLOS002I – JUNE 1983 – REVISED MARCH 2001

## description (continued)

Because of the extremely high input impedance and low input bias and offset currents, applications for the TLC252/25\_2 series include many areas that have previously been limited to BIFET and NFET product types. Any circuit using high-impedance elements and requiring small offset errors is a good candidate for cost-effective use of these devices. Many features associated with bipolar technology are available with LinCMOS™ operational amplifiers without the power penalties of traditional bipolar devices. General applications such as transducer interfacing, analog calculations, amplifier blocks, active filters, and signal buffering are all easily designed with the TLC252/25\_2 series devices. Remote and inaccessible equipment applications are possible using their low-voltage and low-power capabilities. The TLC252/25\_2 series is well suited to solve the difficult problems associated with single-battery and solar-cell-powered applications. This series includes devices that are characterized for the commercial temperature range and are available in 8-pin plastic dip and the small-outline package. The device is also available in chip form.

The TLC252/25\_2 series is characterized for operation from 0°C to 70°C.

SLOS002I – JUNE 1983 – REVISED MARCH 2001

**TLC252Y, TLC25L2Y, and TLC25M2Y chip information**

These chips, properly assembled, display characteristics similar to the TLC252/25\_2. Thermal compression or ultrasonic bonding may be used on the doped-aluminum bonding pads. Chips may be mounted with conductive epoxy or a gold-silicon preform.

SLOS002I – JUNE 1983 – REVISED MARCH 2001

**absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†**

Supply voltage, $V_{DD}$ (see Note 1)	18 V
Differential input voltage, $V_{ID}$ (see Note 2)	$\pm 18$ V
Input voltage range, $V_I$ (any input)	-0.3 V to 18 V
Duration of short circuit at (or below) 25°C free-air temperature (see Note 3)	unlimited
Continuous total dissipation	See Dissipation Rating Table
Operating free-air temperature range, $T_A$	0°C to 70°C
Storage temperature range	-65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	260°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. All voltage values, except differential voltages, are with respect to  $V_{DD-}/GND$ .  
2. Differential voltages are at  $IN+$ , with respect to  $IN-$ .  
3. The output may be shorted to either supply. Temperature and/or supply voltages must be limited to ensure the maximum dissipation rating is not exceeded.

Slew rate at unity gain	$C_L = 20\text{ pF}$ , See Note 6	$V_{I(PP)} = 1\text{ V}$		3.6			0.03		0.43		V/ $\mu\text{s}$	
		$V_{I(PP)} = 2.5\text{ V}$		2.9			0.03		0.40			
$V_n$	$f = 1\text{ kHz}$ ,	$R_S = 20\ \Omega$		2.5			68		32		$\text{nV}/\sqrt{\text{Hz}}$	
$B_{OM}$	Maximum output-swing bandwidth $V_O = V_{OH}$ , $R_L = 10\text{ k}\Omega$	$C_L = 20\text{ pF}$ ,		320			5		55		kHz	
$B_1$	Unity-gain bandwidth $V_I = 10\text{ mV}$ ,	$C_L = 20\text{ pF}$		1.7			0.085		0.525		MHz	
$\phi_m$	Phase margin $f = B_1$ , $C_L = 20\text{ pF}$	$V_I = 10\text{ mV}$ ,		46°			34°		40°			

- NOTES: 4. The typical values of input bias current and input offset current below 5 pA were determined mathematically.  
5. This range also applies to each input individually.  
6. For low-bias mode,  $R_L = 1\text{ M}\Omega$ ; for medium-bias mode,  $R_L = 100\text{ k}\Omega$ , and for high-bias mode,  $R_L = 10\text{ k}\Omega$ .

PARAMETER MEASUREMENT INFORMATION

single-supply versus split-supply test circuits

Because the TLC252, TLC25L2, and TLC25M2 are optimized for single-supply operation, circuit configurations used for the various tests often present some inconvenience since the input signal, in many cases, must be offset from ground. This inconvenience can be avoided by testing the device with split supplies and the output load tied to the negative rail. A comparison of single-supply versus split-supply test circuits is shown below. The use of either circuit gives the same result.

## APPLICATION INFORMATION

### **latch-up avoidance**

Junction-isolated CMOS circuits have an inherent parasitic PNP structure that can function as an SCR. Under certain conditions, this SCR may be triggered into a low-impedance state, resulting in excessive supply current. To avoid such conditions, no voltage greater than 0.3 V beyond the supply rails should be applied to any pin. In general, the operational amplifier supplies should be applied simultaneously with, or before, application of any input signals.

### **output stage considerations**

The amplifier's output stage consists of a source-follower-connected pullup transistor and an open-drain pulldown transistor. The high-level output voltage ( $V_{OH}$ ) is virtually independent of the  $I_{DD}$  selection and increases with higher values of  $V_{DD}$  and reduced output loading. The low-level output voltage ( $V_{OL}$ ) decreases with reduced output current and higher input common-mode voltage. With no load,  $V_{OL}$  is essentially equal to the potential of  $V_{DD-}/GND$ .

### **supply configurations**

Even though the TLC252/25\_2C series is characterized for single-supply operation, it can be used effectively in a split-supply configuration if the input common-mode voltage ( $V_{ICR}$ ), output swing ( $V_{OL}$  and  $V_{OH}$ ), and supply voltage limits are not exceeded.

### **circuit layout precautions**

The user is cautioned that whenever extremely high circuit impedances are used, care must be exercised in layout, construction, board cleanliness, and supply filtering to avoid hum and noise pickup, as well as excessive dc leakages.

## IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgment, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Customers are responsible for their applications using TI components.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, license, warranty or endorsement thereof.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations and notices. Representation or reproduction of this information with alteration voids all warranties provided for an associated TI product or service, is an unfair and deceptive business practice, and TI is not responsible nor liable for any such use.

Resale of TI's products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service, is an unfair and deceptive business practice, and TI is not responsible nor liable for any such use.
