

MC10E116, MC100E116

5V ECL Quint Differential Line Receiver

The MC10E/100E116 is a quint differential line receiver with emitter-follower outputs. For applications which require bandwidths greater than that of the E116, the E416 device may be of interest.

Active current sources plus a deep collector feature of the MOSAIC III process provide the receivers with excellent common-mode noise rejection. Each receiver has a dedicated V_{CCO} supply lead, providing optimum symmetry and stability.

If both inverting and non-inverting inputs are at an equal potential of > -2.5 V, the receiver does *not* go to a defined state, but rather current-shares in normal differential amplifier fashion, producing output voltage levels midway between HIGH and LOW, or the device may even oscillate.

The V_{BB} pin, an internally generated voltage supply, is available to this device only. For single-ended input conditions, the unused differential input is connected to V_{BB} as a switching reference voltage. V_{BB} may also rebias AC coupled inputs. When used, decouple V_{BB} and V_{CC} via a $0.01 \mu\text{F}$ capacitor and limit current sourcing or sinking to 0.5 mA. When not used, V_{BB} should be left open.

The 100 Series contains temperature compensation.

- 500 ps Max. Propagation Delay
- V_{BB} Supply Output
- Dedicated V_{CCO} Pin for Each Receiver
- PECL Mode Operating Range: $V_{CC} = 4.2$ V to 5.7 V with $V_{EE} = 0$ V
- NECL Mode Operating Range: $V_{CC} = 0$ V with $V_{EE} = -4.2$ V to -5.7 V
- Output Qs will default low when inputs are $< V_{CC} - 2.5$ V
- Internal Input $50 \text{ K}\Omega$ Pulldown Resistors
- Meets or Exceeds JEDEC Spec EIA/JESD78 IC Latchup Test
- ESD Protection: Human Body Model; $> 2 \text{ KV}$, Machine Model; $> 200 \text{ V}$
- Moisture Sensitivity Level 1
For Additional Information, see Application Note AND8003/D
- Flammability Rating: UL 94 V-0 @ 0.125 in, Oxygen Index: 28 to 34
- Transistor Count = 98 devices
