

MC1404

Voltage Reference Family

The MC1404 of ICs is a family of temperature-compensated voltage references for precision data conversion applications, such as A/D, D/A, V/F, and F/V. Advances in laser-trimming and ion-implanted devices, as well as monolithic fabrication techniques, make these devices stable and accurate to 12 bits over both military and commercial temperature ranges. In addition to excellent temperature stability, these parts offer excellent long-term stability and low noise.

- Output Voltages: Standard, 5.0 V, 6.25 V, 10 V
- Trimmable Output: $> \pm 6\%$
- Wide Input Voltage Range: $V_{ref} + 2.5 \text{ V}$ to 40 V
- Low Quiescent Current: 1.25 mA Typical
- Temperature Coefficient: 10 ppm/ $^{\circ}\text{C}$ Typical
- Low Output Noise: 12 μV p-p Typical
- Excellent Ripple Rejection: $> 80 \text{ dB}$ Typical

Typical Applications

- Voltage Reference for 8 to 12 Bit D/A Converters
- Low T_C Zener Replacement
- High Stability Current Reference
- MPU D/A and A/D Applications

Figure 10. Output Trim Configuration

The MC1404 trim terminal can be used to adjust the output voltage over a $\pm 6.0\%$ range. For example, the output can be set to 10.000 V or to 10.240 V for binary applications. For trimming, Bourns type 3059, 100 k Ω or 200 k Ω trimpot is recommended.

Although Figure 10 illustrates a wide trim range, temperature coefficients may become unpredictable for trim $> \pm 6.0\%$.

Figure 11. Precision Supply Using MC1404

The addition of a power transistor, a resistor, and a capacitor converts the MC1404 into a precision supply with one ampere current capability. At $V^+ = 15$ V, the MC1404 can carry in excess of 14 mA of load current with good regulation. If the power transistor current gain exceeds 75, a one ampere supply can be realized.
