Octal Buffers/Line Drivers With TRI -State Outputs

General Description

The AC540 is similar in function to the AC240, except that the inputs and outputs are on opposite sides of the package (see Connection Diagrams). This pinout arrangement makes this device especially useful as an output port formicroprocessors, allowing ease of layout and greater PC board density.

The AC540 is an octal buffer/line driver designed to be employed as a memoryand address driver, clock driver and bus oriented transmitter/receiver.
