

**NDS8426****Single N-Channel Enhancement Mode Field Effect Transistor****General Description**

These N-Channel enhancement mode power field effect transistors are produced using National's proprietary, high cell density, DMOS technology. This very high density process is especially tailored to minimize on-state resistance and provide superior switching performance. These devices are particularly suited for low voltage applications such as notebook computer power management and other battery powered circuits where fast switching, low in-line power loss, and resistance to transients are needed.

**Features**

- 9.9 A, 20 V.  $R_{DS(ON)} = 0.015 \Omega @ V_{GS} = 4.5 \text{ V}$ .  
 $R_{DS(ON)} = 0.020 \Omega @ V_{GS} = 2.7 \text{ V}$ .
- High density cell design for extremely low  $R_{DS(ON)}$ .
- High power and current handling capability in a widely used surface mount package.

Notes:

- $R_{\theta JA}$  is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins.  $R_{\theta JC}$  is guaranteed by design while  $R_{\theta CA}$  is determined by the user's board design.

$$P_D(t) = \frac{T_J - T_A}{R_{\theta JA}(t)} = \frac{T_J - T_A}{R_{\theta JC} + R_{\theta CA}(t)} = I_D^2(t) \times R_{DS(ON)@T_J}$$

Typical  $R_{\theta JA}$  using the board layouts shown below on 4.5"x5" FR-4 PCB in a still air environment:

- 50°C/W when mounted on a 1 in<sup>2</sup> pad of 2oz copper.
- 105°C/W when mounted on a 0.04 in<sup>2</sup> pad of 2oz copper.
- 125°C/W when mounted on a 0.006 in<sup>2</sup> pad of 2oz copper.
