Data Sheet July 2000 File Number 2912.4

8MHz, Precision, JFET Input Operational Amplifier

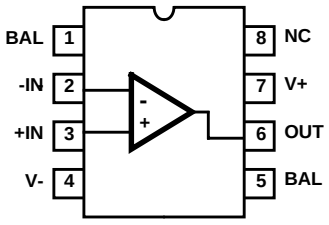
The Intersil HA-5170 is a precision, JFET input, operational amplifier which features low noise, low offset voltage and low offset voltage drift. Constructed using FET/Bipolar technology, the Intersil Dielectric Isolation (DI) process, and laser trimming this amplifier offers low input bias and offset currents. This operational amplifier design also completely eliminates the troublesome errors due to warm-up drift.

Complementing these excellent input characteristics are dynamic performance characteristics never before available from precision operational amplifiers. An 8V/µs slew rate and 8MHz bandwidth allow the designer to extend precision instrumentation applications in both speed and bandwidth. These characteristics make the HA-5170 well suited for precision integrator amplifier designs.

The superior input characteristics also make the HA-5170 ideally suited for transducer signal amplifiers, precision voltage followers and precision data acquisition systems. For application assistance, please refer to Application Note AN540 addressing specifically this device.

Pinout

HA-5170
(CERDIP)
TOP VIEW



Features

- Low Offset Voltage 100µV
- Low Offset Voltage Drift . . . . . 2µV/^{o}C
- Low Noise. . . . . 10nV/$\sqrt{Hz}$
- High Open Loop Gain. 600kV/V
- Wide Bandwidth 8MHz
- Unity Gain Stable

Applications

- High Gain Instrumentation Amplifiers
- Precision Data Acquisition
- Precision Integrators
- Precision Threshold Detectors
- For Further Design Ideas, Refer to Application Note 540

Ordering Information

PART NUMBER	TEMP. RANGE (^{o}C)	PACKAGE	PKG. NO.
HA7-5170-5	0 to 75	8 Ld CERDIP	F8.3A

Absolute Maximum Ratings

Voltage Between V+ and V- Terminals 44V
Differential Input Voltage 30V
Output Short Circuit Duration . . . . . Indefinite

Operating Conditions

Temperature Range
HA-5170-5 . . . . . 0^oC to 75^oC

Thermal Information

Thermal Resistance (Typical, Note 1)	θ_{JA} ($^oC/W$)	θ_{JC} ($^oC/W$)
CERDIP Package	115	28

Maximum Junction Temperature . . . . . 175^oC
Maximum Storage Temperature Range . . . . . -65^oC to 150^oC
Maximum Lead Temperature (Soldering 10s) . . . . . 300^oC

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTE:

1. θ_{JA} is measured with the component mounted on a low effective thermal conductivity test board in free air. See Tech Brief TB379 for details.

Electrical Specifications V_{SUPPLY} = ±15V, Unless Otherwise Specified

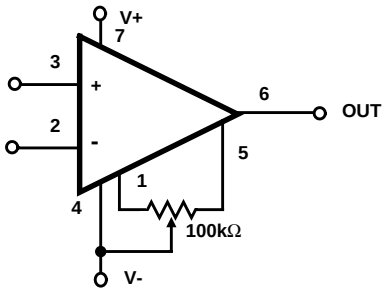
Supply Current		Full	-	1.9	2.5	mA
Power Supply Rejection Ratio (Note 7)		Full	90	105	-	dB

NOTES:

2. See “Test Circuits and Waveforms” section.
3. Parameter is not 100% tested. 90% of all units meet or exceed these specifications.
4. Full power bandwidth guaranteed based on slew rate measurement using: $FPBW = \frac{\text{Slew Rate}}{2\pi V_{PEAK}}$.
5. I_{SC} turns on at ≅ 23mA.
6. Settling time is measured to 0.1% of final value for a 10V output step and A_V = -1.
7. V+ = +15V, V- = -10V to -20V and V- = -15V, V+ = +10V to +20V.

Test Circuits and Waveforms



Tested Offset Adjustment Range is $|V_{OS}$ + 1mV| minimum referred to output. Typical range is ±5mV with R_T = 1kΩ and ±15mV with R_T = 100kΩ.

NOTES:

1. Index area: A notch or a pin one identification mark shall be located adjacent to pin one and shall be located within the shaded area shown. The manufacturer's identification shall not be used as a pin one identification mark.
2. The maximum limits of lead dimensions b and c or M shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
3. Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness.
4. Corner leads (1, N, N/2, and N/2+1) may be configured with a partial lead paddle. For this configuration dimension b3 replaces dimension b2.
5. This dimension allows for off-center lid, meniscus, and glass overrun.
6. Dimension Q shall be measured from the seating plane to the base plane.
7. Measure dimension S1 at all four corners.
8. N is the maximum number of terminal positions.
9. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
10. Controlling dimension: INCH
