

# Dual Precision JFET Input Operational Amplifiers

## FEATURES

- Internally Trimmed Offset Voltage
- Offset Voltage Drift
- High Slew Rate
- Wide Bandwidth
- Low Supply Current per Amplifier
- Low Input Bias Current
- Standard 8-Pin Configuration
- All Packages Available:

1mV Max.  
 $10\mu\text{V}/^\circ\text{C}$  Max.  
 $10\text{V}/\mu\text{s}$  Min.  
 3.5MHz Min.  
 1.8mA Typ.  
 10pA Typ.

Metal Can  
 Hermetic DIP  
 Plastic DIP

## DESCRIPTION

Linear Technology's LF412A and OP-215 series of dual JFET input op amps feature several improvements compared to similar types from other manufacturers.

Both devices have lower input bias and offset currents over the entire temperature range, and are available in all standard 8-pin packages.

In addition, Linear's LF412A has lower voltage noise and higher voltage gain. Linear's OP-215 supply currents are nearly halved.

Please see the LT1057/LT1058 data sheet for applications requiring higher performance. The LT1057 is a pin compatible JFET input dual, the LT1058 is a JFET input quad op amp in the standard 14-pin DIP configuration.

2

## APPLICATIONS

- Sample and Hold Amplifiers
- Output Amplifier for Dual Current Output DACs
- High Speed Integrators
- Photocell Amplifiers
- High Input Impedance Instrumentation Amplifiers

Slew Rate

Voltage Noise Density vs Frequency

**ABSOLUTE MAXIMUM RATINGS**

Supply Voltage  
 LF412AM/AC, OP-215A/E..... ± 22V  
 LF412M/C, OP-215C/G ..... ± 18V  
 Internal Power Dissipation ..... 670mW  
 Operating Temperature Range  
 LF412AM/M, OP-215A/C..... -55°C to 125°C  
 LF412AC/C, OP-215E/G ..... 0°C to 70°C  
 Differential Input Voltage  
 LF412AM/AC, OP-215A/E..... ± 40V  
 LF412M/C, OP-215C/G..... ± 30V  
 Input Voltage (Note A)  
 LF412AM/AC, OP-215A/E..... ± 20V  
 LF412M/C, OP-215C/G ..... ± 16V  
 Output Short Circuit Duration ..... Indefinite  
 Storage Temperature Range..... -65°C to 150°C  
 Lead Temperature (Soldering, 10 sec) ..... 300°C

**Note A:** Maximum negative input voltage is equal to the negative supply voltage.

The ● denotes the specifications which apply over the full operating temperature range. The shaded electrical specifications indicate those parameters which have been improved or guaranteed test limits provided for the first time.

**Note 1:** Input bias and offset currents are specified for two different conditions. The T specification is with the junction at ambient temperature; the

warmed-up specification is with the device operating in a warmed-up condition at the ambient temperature specified.

**Note 2:** Gain-bandwidth product is not tested. It is guaranteed by design and by inference from the slew rate measurement.

**Note 3:** The LF412A is 100% tested to this specification. All other grades are sample tested.
