

Regulating Pulse Width Modulators

FEATURES

- Undervoltage Lockout with Hysteresis
- *Guaranteed* 1% 5.1V Reference
- *Guaranteed* 10mV/1000 Hr Long Term Stability
- Latching PWM
- 8V to 35V Operation
- 100Hz to 400kHz Oscillator
- 400mA Source and Sink Current

APPLICATIONS

- Switching Power Supplies
- Motor Speed Control
- Power Converters

DESCRIPTION

The LT1525A and LT1527A are improved general purpose switching regulator control circuits. Included on the chip are a trimmed 1% voltage subsurface zener reference, oscillator, comparator and high current class B totem pole output drivers. Included in the design of the LT1525A are easy synchronization to an external clock, soft-start and adjustable deadtime control. A shutdown pin allows instantaneous shutdown.

The LT1525A and LT1527A differ only in their output logic phasing. The LT1525A has a low output during the "off" state, while the LT1527A has a high output during the "off" state. Both devices have undervoltage lockout with about 0.5V hysteresis, giving reliable operation even with slowly varying supplies.

The combination of improved features and advanced processing for high reliability make Linear Technology's switching regulators a supreme choice.

BLOCK DIAGRAM

LT1525A Start-Up

ABSOLUTE MAXIMUM RATINGS

(Note 1)

Supply Voltage ($+V_{IN}$)	+40V
Logic Inputs	-0.3V to +5.5V
Analog Inputs	-0.3V to $+V_{IN}$
Output Current, Source or Sink	500mA
Reference Output Current	50mA
Oscillator Charging Current	5mA
Power Dissipation at $T_A = +25^\circ\text{C}$ (Note 2)	1000mW
Thermal Resistance: Junction to Ambient	100°C/W
Power Dissipation at $T_C = +25^\circ\text{C}$ (Note 3)	2000mW
Thermal Resistance: Junction to Case	60°C/W
Operating Temperature Range	
1525A, 1527A	-55°C to 150°C
3525A, 3527A	0°C to 70°C
Storage Temperature Range	-65°C to 150°C
Lead Temperature (Soldering, 10 sec.)	+300°C

PACKAGE/ORDER INFORMATION

The ● denotes the specifications which apply of the full operating temperature range.

Note 1: Values beyond which damage may occur.

Note 2: Derate at $10mW/^\circ C$ for ambient temperatures above $+50^\circ C$.

Note 3: Derate at $16mW/^\circ C$ for case temperatures above $+25^\circ C$.

Note 4: Range over which the device is functional and parameter limits are guaranteed.

Note 5: These parameters, although guaranteed over the recommended operating conditions, are not 100% tested in production.

Note 6: Tested at $f_{OSC} = 40kHz$ ($R_T = 3.6k\Omega$, $C_T = 0.01\mu F$, $R_D = 0\Omega$).

Note 7: Applies to 1525A/3525A only, due to polarity of output pulses.

APPLICATIONS INFORMATION

Shutdown Options

1. An external open collector comparator or transistor ^{P21} can be used to pull down the compensation pin (9). This will set the PWM latch and turn off both outputs. Pulse-by-pulse protection can be accomplished if the shutdown signal is momentary, since the PWM latch will be reset with each clock pulse.
2. Shutdown can also be accomplished by pulling down on the soft-start pin (8). When using this approach, shutdown will not affect the amplifier compensation network; however, if a soft-start capacitor is used, it must be discharged, possibly slowing shutdown response.

APPLICATIONS INFORMATION

- Applying a positive-going signal to the shutdown pin (10) will provide the most rapid shutdown of the outputs if a soft-start capacitor is not used at pin 8. An external soft-start capacitor at pin 8 will slow shutdown response due to the discharge time of the soft-start capacitor. Discharge current is approximately twice the charging current.
- The shutdown terminal can be used to set the PWM latch on a pulse-by-pulse basis if there is no external capacitance on pin 8. Soft-start characteristics may still be achieved by applying an external capacitor, blocking diode and charging resistor to the compensation pin (9).

TYPICAL APPLICATIONS

Single Ended Supply

FOR SINGLE ENDED SUPPLIES, THE DRIVER OUTPUTS ARE GROUND. THE $+V_C$ TERMINAL IS SWITCHED TO GROUND BY THE TOTEM-POLE SOURCE TRANSISTORS ON EVERY OSCILLATOR CYCLE.

Bipolar Push-Pull Supply

IN CONVENTIONAL PUSH-PULL BIPOLAR DESIGNS, FORWARD BASE DRIVE IS CONTROLLED BY R1-R3. RAPID TURN-OFF TIMES FOR THE POWER DEVICES ARE ACHIEVED WITH SPEED-UP CAPACITORS C1 AND C2.

Power FETs Push-Pull Supply

THE LOW SOURCE IMPEDANCE OF THE OUTPUT DRIVERS PROVIDES RAPID CHARGING OF POWER FET INPUT CAPACITANCE, WHILE MINIMIZING EXTERNAL COMPONENTS.

Driving Transformers Directly

LOW POWER TRANSFORMERS CAN BE DRIVEN DIRECTLY BY THE 1525A. AUTOMATIC RESET OCCURS DURING DEADTIME, WHEN BOTH ENDS OF THE PRIMARY WINDING ARE SWITCHED TO GROUND.
