

## SP3486 and SP3487

### +3.3V Low Power Quad RS-485/RS-422 Line Drivers

- RS-485 or RS-422 Quad Differential Line Drivers
- Operates from a single +3.3V supply
- Interoperable with +5.0V logic
- Tri-state Output Control
- -7V to +12V Common-Mode Input Voltage Range
- Common Driver Enable Control (**SP3486**)
- Independent Driver Enable Controls for each pair of Drivers (**SP3487**)
- Compatibility with LTC486 and SN75172 (**SP3486**)
- Compatibility with LTC487 and SN75174 (**SP3487**)

#### DESCRIPTION

The **SP3486** and the **SP3487** are +3.3V low power quad drivers that meet the specifications of the RS-485 and RS-422 serial protocols. These devices are pin-to-pin compatible with Sipex's SP486 and SP487 devices as well as popular industry standards. The **SP3486** and **SP3487** feature Sipex's BiCMOS process allowing low power operation without sacrificing performance. The **SP3486** and **SP3487** meet the electrical specifications of RS-485 and RS-422 serial protocols up to 10Mbps under load. The SP3486 features a common driver enable control. The **SP3487** provides independent driver enable controls for each pair of drivers. Both devices feature tri-state outputs and a -7V to +12V common-mode input voltage range.

## ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

**CAUTION:**  
ESD (ElectroStatic Discharge) sensitive device. Permanent damage may occur on unconnected devices subject to high energy electrostatic fields. Unused devices must be stored in conductive foam or shunts. Personnel should be properly grounded prior to handling this device. The protective foam should be discharged to the destination socket before devices are removed.

## FEATURES

The **SP3486** and the **SP3487** are +3.3V low power quad line drivers that meet the specifications of the RS-485 and RS-422 serial protocols. These devices are pin-to-pin compatible with Sipex's SP486 and SP487 devices as well as popular industry standards. The **SP3486** and **SP3487** devices feature Sipex's BiCMOS process allowing low power operation without sacrificing performance.

The RS-485 standard is ideal for multi-drop applications or for long distance interfaces. RS-485 allows up to 32 drivers and 32 receivers to be connected to a data bus, making it an ideal choice for multi-drop applications. Since the cabling can be as long as 4,000 feet, RS-485 transceivers are equipped with a wide (-7V to +12V) common mode range to accommodate ground potential differences. Data is virtually immune to noise in the transmission line because the RS-485 protocol is a differential interface.

## Driver

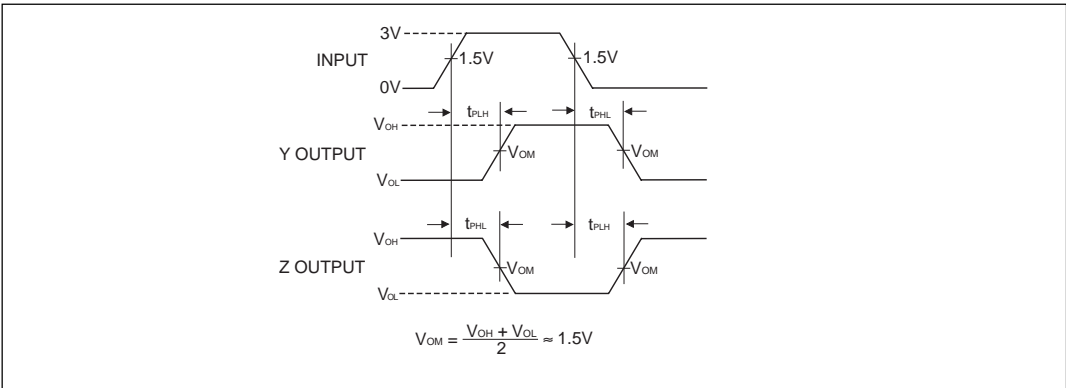

The drivers for both the **SP3486** and **SP3487** have differential outputs. The typical voltage output swing with no load will be 0V to +5V. With worst case loading of 54Ω across the differential outputs, the driver can maintain greater than +1.5V voltage levels.

The drivers of the **SP3486** feature active HIGH and active LOW common driver enable controls. Refer to **SP3486** Truth Table in Table 1. The **SP3487** provides independent, active high driver enable controls for each pair of drivers. Refer to **SP3487** Truth Table in Table 2. The driver outputs are short-circuit limited to 250mA. The **SP3486** and **SP3487** drivers meet the electrical specifications of RS-485 and RS-422 serial protocols up to 10Mbps under load.
