

7A Ultra Dropout Voltage Regulator

Fast Response, Adjustable & Fixed

FEATURES

- Low Dropout Voltage 540mV at 7A Full Load Current
- Adjustable Output Down to 1.25V from ATX Power Supply
- Fixed Output Voltages of 3.3V and 2.5V
- Extremely Tight Load and Line Regulation
- Standard 5-Terminal Low Cost TO-220 and TO-263
- Replacement to Industry Standard LT1580

APPLICATIONS

- 3.3V ATX Power Supplies
- 3.3V to 2.9V for Portable PENTIUM™ Processor
- 5V to 3.5V VRE Supply
- High efficiency "Green" Computer Systems

Now Available in Lead Free Packaging

DESCRIPTION

The SPX1580 is a 7A Low Dropout Regulator with extremely low dropout voltage. The adjustable version requires only two external resistors to set the output voltage. The fixed version has a preset output of 3.3V or 2.5V and does not require any external resistors. The SPX1580 features a low dropout of 540mV(Typ.) and offers fast transient response. This device is suitable for Pentium applications requiring 2.5V from 3.3V ATX power supplies, where a low current input voltage 1V greater than the output voltage is available. With an external sense pin the load regulation is less than 1mV. This device is an excellent choice for the use of powering low voltage microprocessors that require a lower dropout, fast transient response to regulate from 3.3V and 5V supplies. The SPX1580 is also an excellent choice as a post regulator for switching supplies applications.

The SPX1580 offers protection against over-current faults, reversed input polarity, over temperature operation and positive and negative transient voltage.

The SPX1580 is offered in a 5 pin TO-220 and TO-263 compatible with industry standard 5-terminal regulators. For 5A, 3A and 1.5A ultra low dropout versions refer to SPX1581, SPX1582 and SPX1583 data sheets respectively.

TYPICAL APPLICATIONS CIRCUITS

ABSOLUTE MAXIMUM RATINGS

Power Dissipation Internally Limited
 Lead Temp. (Soldering, 10 Seconds) 300°C
 Storage Temperature Range -65°C to +150°C
 Operating Junction Temperature Range
 SPX1580 Control Section 0°C to +125°C
 SPX1580 Power Transistor 0°C to +150°C

Input Supply Voltage 7V
 V_{CTRL} Input Voltage 13.2V

ELECTRICAL CHARACTERISTICS

Electrical characteristics at $V_{OUT} = V_{SENSE}$, $V_{ADJ} = 0V$, $T_A = 25^\circ C$, $C_{CTL} = C_{PWR} = C_{OUT} = 33\mu F$ tantalum cap unless otherwise specified.
 The ♦ denotes the specifications which apply over the -40°C to 85°C temperature range, unless otherwise specified.

PARAMETER	MIN.	TYP.	MAX.	UNITS		CONDITIONS

Pin Number	Pin Name	DESCRIPTION
1	SENSE	Allows Kelvin sense of V_{OUT} at load. (Positive side of the reference voltage of the device)
2	ADJ	Negative side of the reference voltage for the device. Adding a small bypass capacitor from ADJ pin to ground will improve the transient response.
3	V_{OUT}	Power output of the device.
4	V_{CTRL}	Supply pin for the control circuitry of the device. The current flow into this pin will be about 1% of the output current. V_{CTRL} must be between 0.1V and 1.3V greater than the output voltage for the device to regulate.
5	V_{IN}	Output load current is supplied through this pin. V_{IN} must be between 0.1V and 0.8V greater than the output voltage for this device to regulate.

BLOCK DIAGRAM

APPLICATION INFORMATION

The SPX1580 is designed as a high performance and low cost solution for application requiring a lower dropout than traditional NPN regulators.

The SPX1580 uses a separate input voltage V_{CTRL} ($V_{CTRL} \geq V_{OUT} + 1.3V$) to minimize the dropout voltage. This allows the 2.5V power for the load to come from a 3.3V system supply.

As added benefit this will reduce the heat dissipation*, and lower heatsink and cooling fan cost.

A typical application would use 3.3V for V_{IN} and 5.0V for V_{CTRL} from a motherboard power supply to provide a nominal 2.5V output. Using the sense pin allows Kelvin measure the output, reducing resistance-associated errors.

The SPX1580 can power the 2.5V core voltage for microprocessors such as a PentiumPC™, P55C™, AMD5k86™ and K6™ and the IBM PowerPC™ 603EV and 604EV processors.

Output Capacitor

An output capacitor for SPX1580 is for circuit compensation for the device to prevent oscillation. The minimum size of the output capacitor is either a 330μF aluminum electrolytic capacitor or 33μF tantalum. Larger capacitor values improve the regulator transient response performance and increase surge load capability. The output capacitor should have an ESR not more than 0.3Ω.

Adjustable Regulator Design

1.25V reference voltage is being developed between the SENSE pin and the ADJ pin of the SPX1580. Adding two external resistors (see fig 1.) will allow setting the output voltage from 1.25V to 6V. R_1 is chosen so that this current is specified minimum load current of 10mA. R_2 is given by the formula: $V_{OUT} = V_{REF} (1 + R_2/R_1) + I_{ADJ} R_2$. The current flowing from the ADJ pin is typically 50uA. This ADJ pin contributes to the final V_{OUT} but is usually neglected. Connecting the sense pin to the top of the resistor divider will improve load regulation.

Lowering Noise

Using the SENSE pin to Kelvin the load will increase accuracy of the output voltage during load regulation. For the fixed voltage device, adding a bypass capacitor from ADJ pin to ground improves transient response. A 330pF ceramic capacitor is recommended.
