N-CHANNEL ENHANCEMENT MODE

TERMINAL DIAGRAM

The IRF220, IRF221, IRF222 and IRF223 are n-channel enhancement-mode silicon-gate power field-effect transistors designed for applications such as switching regulators, switching converters, motor drivers, relay drivers, and drivers for high-power bipolar switching transistors requiring high speed and low gate-drive power. These types can be operated directly from integrated circuits.

The IRF-types are supplied in the JEDEC TO-204AA steel package.
