

LM317AHV

3-Terminal Positive Adjustable Regulator

Features

- Output Current in Excess of 1.5A
- Output Adjustable Between 1.2V and 57V
- Internal Thermal Overload Protection
- Internal Short Circuit Current Limiting
- Output Transistor Safe Area Compensation
- TO-220 Package

Description

This monolithic integrated circuit is an adjustable 3-terminal positive voltage regulator designed to supply more than 1.5A of load current with an output voltage adjustable over a 1.2 to 57V. It employs internal current limiting, thermal shut down and safe area compensation.

Note :

1. Load and line regulation are specified at constant junction temperature. Change in V_D due to heating effects must be taken into account separately. Pulse testing with low duty is used. ($P_{MAX} = 20W$)
2. C_{ADJ}, when used, is connected between the adjustment pin and ground.

Typical Application

- C_i is required when regulator is located an appreciable distance from power supply filter.
 C_o is not needed for stability, however, it does improve transient response.
Since I_{ADJ} is controlled to less than $100\mu A$, the error associated with this term is negligible in most applications.
