DESCRIPTION

This line of solid state LED displays uses newly developed Double Heterojunction (DH) AlGaAs/GaAs material technology. This LED material has outstanding light output efficiency over a wide range of drive currents and can either be DC or pulse driven. The color is deep red at the dominant wavelength of 637 nanometers. Viewability of up to 10 meters (MAN8200 Series) is available for applications in bright sunlight such as automotive and avionic instrumentation, portable instruments, point-of-sale terminals and gas pumps.

FEATURES

- Sunlight Viewable
Typical intensity of 15mcd/Seg at 20mA Drive
- Capable of high drive currents
- Excellent for multiplexing long digit strings
- Three Character Sizes
7.6mm (0.3in), 14.2mm (0.56in), 20.0mm (0.8in)
- Excellent character appearance

NOTES

1. Case temperature of the device immediately prior to the intensity measurement is 25°C .
2. The digits are categorized for luminous intensity with the intensity category designated by a letter on the side of the package.
3. The dominant wavelength, λ_d , is derived from the CIE chromaticity diagram and is that single wavelength which defines the color of the device.

ABSOLUTE MAXIMUM RATINGS (All Products)

Average power per segment or DP ($T_A = 25^\circ\text{C}$)	96 mA
Peak forward current per segment or DP ($T_A = 25^\circ\text{C}$) [1]	160 mA
Average or DC forward current per segment or DP ($T_A = 25^\circ\text{C}$)	40 mA
Operating temperature range	-20°C to $+85^\circ\text{C}$
Storage temperature range	-40°C to $+85^\circ\text{C}$
Reverse voltage per segment or DP	3.0 V
Lead solder temperature (1.59 mm [1/16"] below seating plane)	260°C for 3 sec.

NOTES: 1. Do not exceed maximum average current per segment.

NOTES

1. The digit average Luminous Intensity is obtained by summing the Luminous Intensity of each segment and dividing by the total number of segments. Intensity will not vary more than $\pm 33.3\%$ between all segment within a digit.
2. Leads of the device immersed to 1/16" from the body. Maximum device surface temperature is 140°C .
3. For flux removal, Freon TF, Freon TE, Isopropanol or water may be used up to their boiling points.
4. All displays are categorized for Luminous Intensity. The intensity category is marked on each part as a suffix letter to the part numbers.
