

Si4925DY

Dual P-Channel, Logic Level, PowerTrench MOSFET

General Description

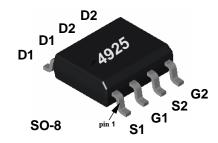

These P-Channel Logic Level MOSFETs are produced using Fairchild Semiconductor's advanced PowerTrench process that has been especially tailored to minimize the on-state resistance and yet maintain low gate charge for superior switching performance.

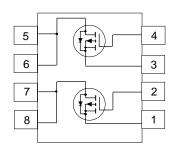

These devices are well suited for notebook computer applications: load switching and power management, battery charging circuits, and DC/DC conversion.

Features

- Low gate charge (14.5nC typical).
- High performance trench technology for extremely low R_{DS/OND}.
- High power and current handling capability.

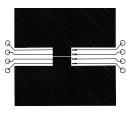

Absolute Maximum Ratings T_a = 25°C unless otherwise noted

Notes:

^{1.} $R_{g,u}$ is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins. $R_{g,C}$ is guaranteed by design while R_{gCA} is determined by the user's board design.
