

Look-ahead carry generator

74F182

FEATURES

- Provides carry look-ahead across a group of four ALUs
- Multi-level look-ahead for high speed arithmetic operation over long word lengths

DESCRIPTION

The 74F182 is a high speed carry look-ahead generator. It accepts up to four pairs of active-Low Carry Propagate ($\overline{P}0, \overline{P}1, \overline{P}2, \overline{P}3$) and Carry Generate ($\overline{G}0, \overline{G}1, \overline{G}2, \overline{G}3$) signals and an active-High Carry input (C_n) and provides anticipated active-High carries ($C_{n+x}, C_{n+y}, C_{n+z}$) across four groups of binary adders. The 74F182 also has active-Low Carry Propagate ($\overline{P}$) Carry Generate ($\overline{G}$) outputs which may be used for further levels of look-ahead.

The logic equations provided at the outputs are:

$$C_{n+x} = G0 + P0C_n$$

$$C_{n+y} = G1 + P1G0 + P1P0C_n$$

$$C_{n+z} = G2 + P2G1 + P2P1G0 + P2P1P0C_n$$

$$\overline{G} = \overline{G}3 + P3\overline{G}2 + P3P2\overline{G}1 + P3P2P1\overline{G}0$$

$$\overline{P} = P3P2P1P0$$

The 74F182 can also be used with binary ALUs in an active-Low or active-High input operand mode. The connections to and from the ALU to the carry look-ahead generator are identical in both cases.

NOTES:

- For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable type.
- All typical values are at V_{CC} = 5V, T_{amb} = 25°C.
- Not more than one output should be shorted at a time. For testing I_{OS}, the use of high-speed test apparatus and/or sample-and-hold techniques are preferable in order to minimize internal heating and more accurately reflect operational values. Otherwise, prolonged shorting of a High output may raise the chip temperature well above normal and thereby cause invalid readings in other parameter tests. In any sequence of parameter tests, I_{OS} tests should be performed last.
