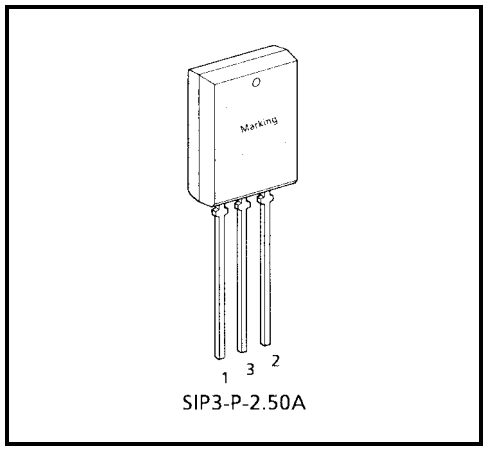
TOSHIBA Bipolar Linear Integrated Circuit Silicon Monolithic

TA78M05SB,TA78M06SB,TA78M08SB,TA78M09SB,TA78M10SB, TA78M12SB,TA78M15SB,TA78M18SB,TA78M20SB,TA78M24SB

Output Current of 0.5 A, Three-Terminal Positive Voltage Regulators

5 V, 6 V, 8 V, 9 V, 10 V, 12 V, 15 V, 18 V, 20 V, 24 V

The TA78M××SB series of fixed-voltage monolithic integrated circuit voltage regulators is designed for a wide range of applications. These regulators employ internal current-limiting, thermal-shutdown and safe-area compensation, making them essentially indestructible. One of these regulators can driver up to 0.5 A of output current.

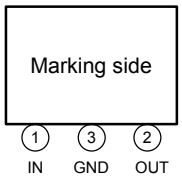


Weight: 1.5 g (Typ.)

Features

- Suitable for CMOS, TTL and the other digital IC's power supply.
- Maximum output current of 0.5 A.
- Internal thermal overload protection.
- Internal short circuit current limiting.
- Package in the plastic case TPL (P_D = 1.8 W).

Pin Assignment



Equivalent Circuit

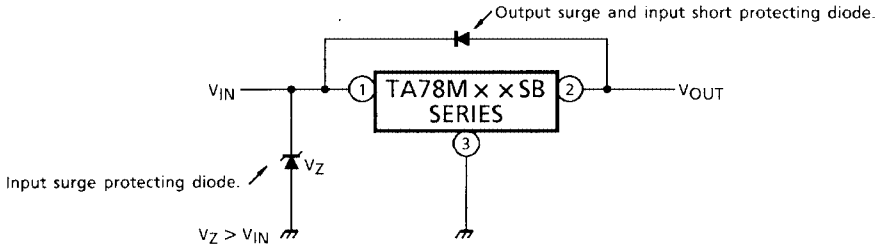
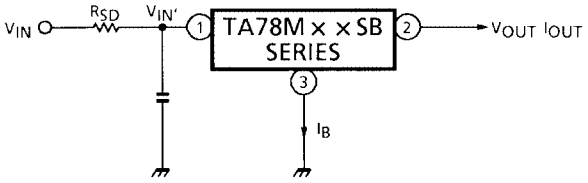
Precautions on Application

(1) In regard to GND, be careful not to apply a negative voltage to the input/output terminal. Further, special care is necessary in case of a voltage boost application.

(2) When a surge voltage exceeding maximum rating is applied to the input terminal or when a voltage in excess of the input terminal voltage is applied to the output terminal, the circuit may be destroyed. Specially, in the latter case, great care is necessary.
Further, if the input terminal sorts to GND in a state of normal operation, the output terminal voltage becomes higher than the input voltage (GND potential), and the electric charge of a chemical capacitor connected to the output terminal flows into the input side, which may cause the destruction of circuit.
In these cases, take such steps as a zener diode and a general silicon diode are connected to the circuit, as shown in the following figure.



(3) When the input voltage is too high, the power dissipation of three terminal regulator increases because of series regulator, so that the junction temperature rises. In such a case, it is recommended to reduce the power dissipation by inserting the power limiting resistor R_{SD} in the input terminal, and to reduce the junction temperature as a result.



The power dissipation P_D of IC is expressed in the following equation.

$$P_D = (V_{IN'} - V_{OUT}) \cdot I_{OUT} + V_{IN'} \cdot I_B$$

If $V_{IN'}$ is reduced below the lowest voltage necessary for the IC, the parasitic oscillation will be caused according to circumstances.
In determining the resistance value of R_{SD}, design with margin should be made by making reference to the following equation.

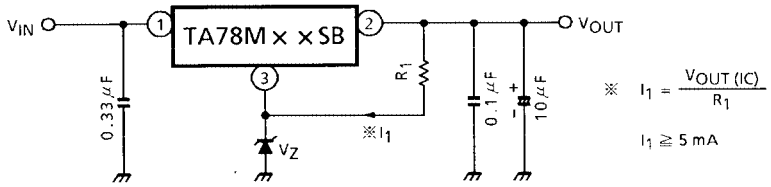
$$R_{SD} < \frac{V_{IN} - V_{IN'}}{I_{OUT} + I_B}$$

(4) Connect the input terminal and GND, and the output terminal and GND, by capacitor respectively. The capacitances should be determined experimentally because they depend on printed circuit board patterns. In particular, adequate investigation should be made so that there is no problem even at time of high or low temperature.

Application Circuits

(1) Voltage Boost Regulator

(a) Voltage boost by use of zener diode

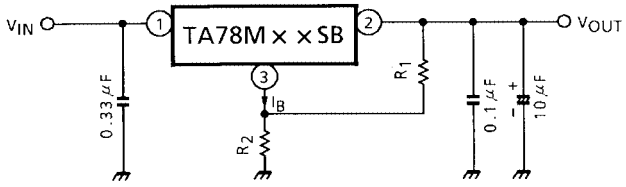


※ $I_1 = \frac{V_{OUT\,(IC)}}{R_1}$

$I_1 \geqq 5$ mA

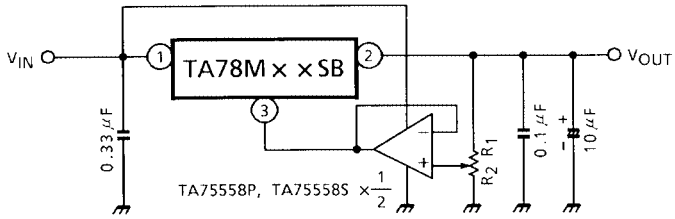
$V_{OUT} = V_{OUT\,(IC)} + V_Z$

(b) Voltage boost by use of resistor



$V_{OUT} = V_{OUT\,(IC)} \left(1 + \frac{R_2}{R_1}\right) + R_2 \cdot I_B$

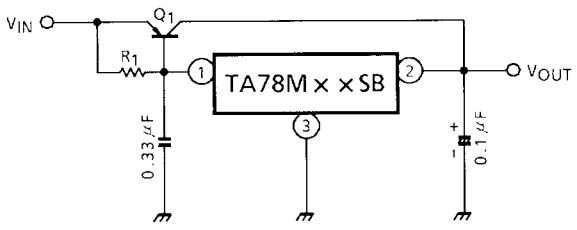
(c) Adjustable output regulator



$V_{OUT} = V_{OUT\,(IC)} \left(1 + \frac{R_2}{R_1}\right)$

(2) Current Boost Regulator

(a) Current boost voltage regulator



Heat sink is needed for Q_1

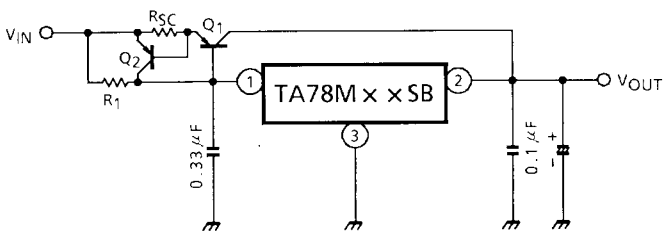
$R_1 \leqq \frac{V_{BE1}}{I_{B\,MAX}}$

where,

V_{BE1} : V_{BE} of external transistor Q_1.

$I_{B\,MAX}$: Quiescent current of IC.

(b) Short-circuit protection

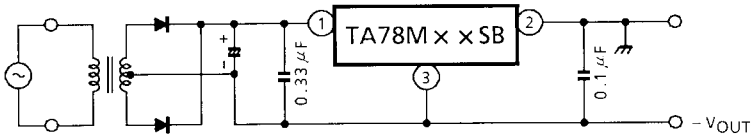


$R_{SC} = \frac{V_{BE2}}{I_{SC}}$

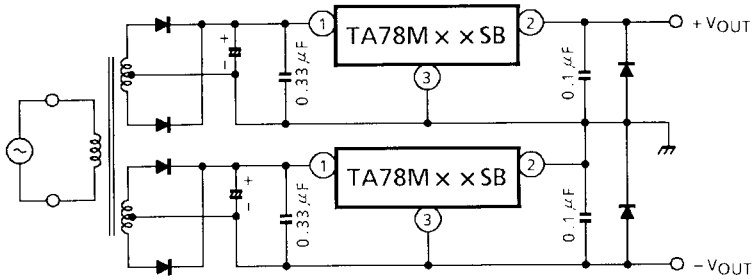
where,

I_{SC} : Short-circuit current

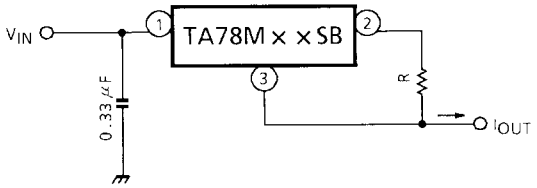
(3) Negative Regulator



(4) Positive and Negative Regulator



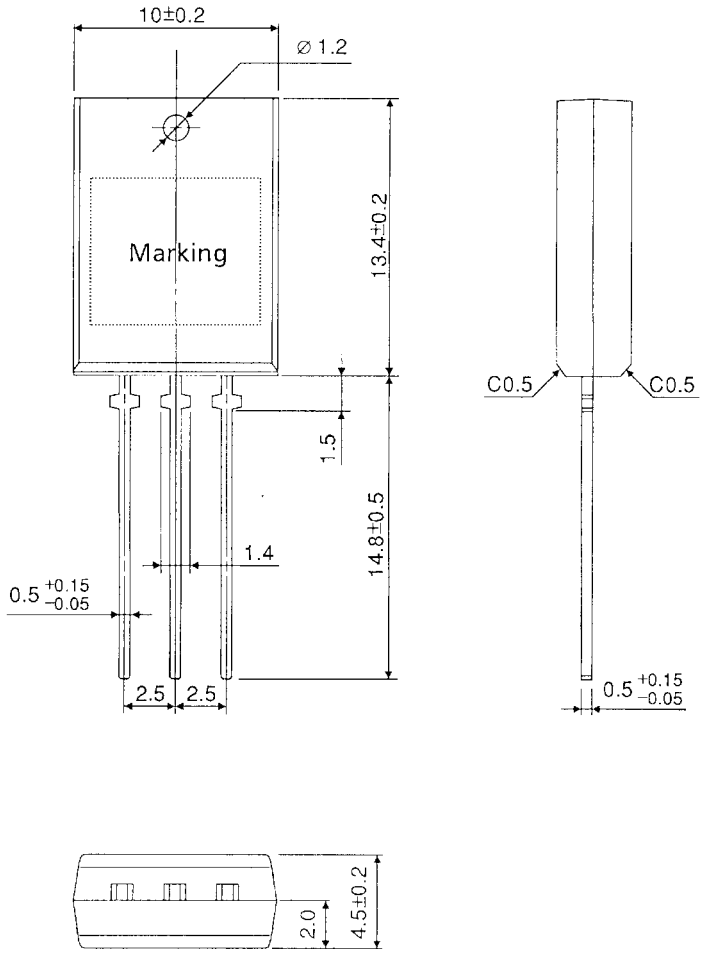
(5) Current Regulator



$$I_{OUT} = \frac{V_{OUT}}{R} + I_B$$

Package Dimensions

SIP3-P-2.50A Unit : mm



Weight : 1.5 g (Typ.)

RESTRICTIONS ON PRODUCT USE

000707EBA

- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
  In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the “Handling Guide for Semiconductor Devices,” or “TOSHIBA Semiconductor Reliability Handbook” etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury (“Unintended Usage”). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer’s own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.
