BILATERAL SWITCH

The TC7S66 is a high Speed C²MOS BILATERAL SWITCH fabricated with silicon gate C²MOS technology. It consists of a high speed switch capable of controlling either digital or analog signals while maintaining the C²MOS low power dissipation. Control input (C) is provided to control the switch. The switch turns ON while the C input is high, and the switch turns OFF while low. Input is equipped with protection circuits against static discharge or transient excess voltage.
