TLP759

- Digital Logic Ground Isolation
- Line Receiver
- Microprocessor System Interfaces
- Switching Power Supply Feedback Control
- Transistor Invertor

The TOSHIBA TLP759 consists of a GaAlAs high-output light emitting diode and a high speed detector of one chip photo diode-transistor. This unit is 8-lead DIP.

TLP759 has no internal base connection, and a faraday shield integrated on the photodetector chip provides an effective common mode noise transient immunity.

So this is suitable for application in noisy environmental condition.
