# 3 W Mono BTL Audio Output Amplifier

## **FEATURES**

- · No external components
- · No switch-on/off clicks
- · Good overall stability
- · Low power consumption
- · Short circuit proof
- · ESD protected on all pins.

# **GENERAL DESCRIPTION**

The ILA7056SH is a mono output amplifier contained in a 9 pin SIL medium power package (SOT110). The device is designed for battery-fed portable mono recorders, radios and television.

## **QUICK REFERENCE DATA**

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
Vp	supply voltage		3	11	18	V
Ро	output power	Vp=11 V, THD=10⊚, RL=16 <b>≟</b>	2.5	3		W
Gv	internal voltage gain		39	40,0	42	dB
lp	total quiescent current	Vp=11 V; RL=		5	7	mA
THD	total harmonic distortion	Po=0,5 W		0,25	1	%

#### **FUNCTIONAL DESCRIPTION**

The ILA7056SH is a mono output amplifier, designed for battery-fed portable radios and mains-fed equipment such as television. For space reasons there is a trend to decrease the number of external components. For portable applications there is also a trend to decrease the number of battery cells, but still a reasonable output power is required.

The ILA7056SH fulfills both of these requirements. It needs no peripheral components, because it makes use of the Bridge-Tied-Load (BTL) principle. Consequently it has, at the same supply voltage, a higher output power compared to a conventional Single Ended output stage. It delivers an output power of 1 W into a loudspeaker load of 8 W with 6 V supply or 3 W into 16 W loudspeaker at 11 V without need of an external heatsink. The gain is internally fixed at 40 dB. Special attention is given to switch-on/off click suppression, and it has a good overall stability. The load can be short circuited at all input conditions.

SYMBOL	PARAMETER	CONDITIONS	MIN.	MAX.	UNIT
Vp	supply voltage		-	18	V
iorm	Peak output current repetitive		-	1	А
iosm	Peak output current non-repetitive		-	1.5	А
Tstg	storage temperature range		-55	150	°C
Tj	junction temperature		-	150	°C
Plot	total power dissipation	T^se < 60 •••C	-	9	W
Tsc	short circuiting time	see note 1	-	1	hr

Note

<sup>1.</sup> The load can be short-circuited at all input conditions.

SYMBOL	PARAMETER	NOM.	UNIT
hibk	from junction to case	10	K/W
Rtll.a	from junction to ambient in free air	55	K/W

## **POWER DISSIPATION**

Assume: VP = 11 V; RL = 16 W.

The maximum sine-wave dissipation is 1.52  $\ensuremath{\text{W}}$ .

The Rth j-a of the package is 55 K/W. Tamb max =  $150 - 55 \text{ } 1.52 = 66.4 \text{ }^{\circ}\text{C}$ .

## **CHARACTERISTICS**

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
Vp	operating supply voltage		3	11	18	٧
IQRM	repetitive peak output current		-	-	0.6	Α
IP	total quiescent current		-	5	7	mA
РО	output power	THD= 10%	2.5	3	-	W
THD	total harmonic distortion	Po = 0.5 W	-	0.25	1	
GV	voltage gain		39	40.5	42	dB
Vno	noise output voltage	note 2	-	180	300	uV
Vno	noise output voltage	note 3	-	60	-	[JV
	frequency response		-	20 to 20.000	-	Hz
RR	ripple rejection	note 4	36	50	-	dB
AV	DC-output offset voltage	note 5	-	-	200	m۷
IZJ	input impedance		-	100	-	kii
1,	input bias current		-	100	300	nA

## Notes to the characteristics

- 1. With a load connected to the outputs the quiescent current will increase, the maximum value of this increase being equal to the DC output offset voltage divided by RL.
- 2. The noise output voltage (RMS value) is measured with RS = 5 kW unweighted (20 Hz to 20 kHz).
- 3. The noise output voltage (RMS value) at f = 500 kHz is measured with RS = 0 W and bandwidth = 5 kHz. With a practical load (RL = 16 W, LL = 200 mH) the noise output current is only 50 nA.
- 4. The ripple rejection is measured with RS = 0 W and f = 100 Hz to 10 kHz. The ripple voltage (200 mV) is applied to the positive supply rail.
- 5. RS = 5 kW.
