NTE1675 Integrated Circuit Dual AF Power Amp, 8.5W

Features:

- Small idling current (20mA/2 channels) enabling prolonged battery life.
- Small dependence of idling current on V_{CC} .
- High power (8.5W typ. X 2).
- High ripple rejection (60dB at steady state). Since filters are arranged in 3 stages (including 1 stage inside IC) to attain satisfactory ripple rejection at transient state, ripple occurring at the time of motor start can be prevented from missing in.
- Small pop noise at the time of power supply ON/OFF and good starting balance between both channels (0.6 sec) due to built-in pop noise limiter.
- Pins provided for compensating high frequency response.
- Small residual noise (0.4mV).
- Wide supply voltage range (6 to 24V) easing design of transformer power supply.
- Built-in thermal shutdown circuit.
- Designed so that inverse insertion or short between adjacent pins causes no destruction.
- Channel-to-channel mirror image pin assignment and provision of Pre GND, Power GND pins enabling stable operation and easing artwork of printed circuit board.
- Minimum number of external parts required (9 pcs. min, 12 pcs. typ)
- Audio muting capability (for automatic music selection, electronic tuner).
