**NTE7165**  
**Integrated Circuit**  
**DMOS Audio Amplifier, 100W,**  
**for Self-Powered Loudspeakers**

**Description:**

The NTE7165 is a monolithic integrated circuit in a 15-Lead Staggered SIP type package designed for use as an audio class AB amplifier in Hi-Fi field applications (Home Stereo, self-powered loudspeakers, Top-Class TV). Thanks to the wide voltage range and to the high output current capability it is able to supply the highest power into both  $4\Omega$  and  $8\Omega$  loads even in the presence of poor supply regulation, with high Supply Voltage Rejection. The built-in muting function with turn-on delay simplifies the remote operation avoiding switching ON/OFF noises.

**Features:**

- Very High Operating Voltage Range
- DMOS Power Stage
- High Output Power (Up To 100W Music Power)
- Muting/Stand-By Functions
- No Switch ON/OFF Noise
- No Boucherot Cells
- Very Low Distortion
- Very Low Noise
- Short Circuit Protection
- Thermal Shutdown
