APPLICATION NOTE

1. Input impedance:

Pin No.	Pin Name	Input impedance
3	V33	39K Ω
4	V5	61K Ω
5	V12	39K Ω
6	PT	279K Ω (VGS1=4.12V) 59.8K Ω (VGS2=0.88V) (VCC=5V, PT=0.88V)

2. Operation Frequency:

The period of the sawtooth is T_{OSC} :

$$I_{CHARGE} = (1.25V / 6.1 K\Omega) * 2 = 410\mu A$$

$$T_{OSC} = (3.3V * C_T) / I_{CHARGE} = (3.3V * 2200pF) / 410\mu A$$

$$F_{OSC} = 1 / T_{OSC} = 56.5 KHZ$$

For Push-Pull applications:

$$F_{PUSH-PULL} = 1 / 2 T_{OSC}$$

AT 2005B

3.REMOTE ON/OFF :

4. Under Voltage Protection Delay Time :

5. Pulse Width Modulation Block :

The output pulse width modulation is generated by comparison of the saw-tooth waveform from the capacitor C_T to the feedback of the voltage.

Therefore, an increase in feedback control signal amplitude cause a linear decrease of the output pulse width. The timing diagram is shown as below:

AT 2005B

6. Protection Control of the Soft-Start:

The soft-start function is to reduce the large current surge during power-up & prevent the output voltages (V33/V5/V12) reach the Over Voltage Protection level . The circuit is shown in reference application circuit .

7. The function of “PT”: (Default floating $V_{PT} = 0.8V$)

This signal is prepared for extra Over Voltage Protection Input ($V_{PT} > 1.25V$) or another Disable Under Voltage Protection function ($V_{PT} < 0.62V$)

8. Reference Application Circuit:
